REVISED LIST OF ANCIENT MONUMENTS IN BENGAL,

1886.

28246

2506

CALCUTTA:

PRINTED IN THE BENGAL SECRETARIAT PRESS

1887.

LIBRARY, NEW DELHI.

LIBRARY, NEW HELF

NOTE.

A LIST of objects of antiquarian interest in the Lower Provinces of Bengal, compiled from official records and other sources, was printed in 1879. Since that time measures have been taken for the conservation of a few of the most important monuments, and additional information has been collected with respect to others, of which some have not hitherto been described. To embody this information in a convenient form, and to correct, as far as possible, inaccuracies in the original list, this second edition is now printed.

The list has been prepared by the Public Works Department of the Government with the assistance of Mr. J. D. Beglar, who has recently been appointed to be Archæological Surveyor in Bengal. This assistance was, however, for the most part given before Mr. Beglar was appointed to fill this position, and it is hoped that the new arrangements now in force under his supervision will result in a further increase in the information available with respect to archæological remains. The tabular form in which the list is prepared is that prescribed by the Government of India in the Home Department [Resolution No. 3-168-83 of 28th November 1883], and an attempt has been made to classify the various remains with regard to their conservation in the future. It is, however, probable that the classification will have to undergo extensive modification with a view to bringing the proposals for conservation within a compass in which they can be considered with practical results; and this will be done from time to time as more detailed information is obtained with regard to the relative importance of each building. The form adopted, although in other respects convenient, renders the list unnecessarily bulky, and when it is next revised a more compact arrangement will be made.

The materials from which the lists have been made were furnished by district officers, in many cases from information received from subordinate officers, and their value accordingly varies widely. For the present, however, until some examination of the buildings is made by the Archeological Survey Department, the descriptions furnished by the district returns must be retained, only obvious and glaring errors being corrected.

As the progress of archeological research discloses new objects of interest, they will be noted for insertion in a succeeding edition. It is requested that any omissions or inaccuracies which may be observed in the present list may be brought to the notice of the Archeological Surveyor, who will report them to the Government for consideration when a fresh edition is under preparation.

January 1887

1	Bankurah	Bishanpur	Fort and gates, temples.	The Bishanpur temples are the chief existing ancient buildings in this district. They stand among the remains of an ancient fort of considerable extent, the circumscribing ramparts of which are still visible with one hundsome gateway. The temples are built of brick, or rather with plaques of bricks or tile work, and are covered with the most curious scalpture. The history of these objects, however, is known only in so far as given in the inscriptions on them.	The owners are the Bishan-pur Rajas.	The gateway is in a fair state of preservation. The temples are in fair repair, but are threatened with ruin from the growth of trees on the walls. There is no way of cradicating the trees, except by breaking open the masonry.	iii	No	No	Constant
2	Ditta	******	The Rus Mun-	Of the temples, one must be classed in class is, one in class ib, and one in class iie, viz: This temple is absolutely unique in style and architecture, not only in Bengal, but in India. Of the minor brick-buildings in the Bardwan Circle, this is most worth preservation.	*****	6000H:	ia	Yes	No	AND WATER

Number							Cla-s.	Remarks.		building exist,	
3	Bankurah	******	The Malleswar temple.	The finest of the numerous temples here which are typical of a particular age and style. It is the temple of Bishanpur, and has long been regarded as the oldest in Bishanpur. It is said, on the strength of the inscription it bears to date back to near the beginning of the Malla era.		151844	ib	Yes		No	****
4	Ditto	***	The "Jor Ban- gla" temple.	This temple is a curious and unique specimen of its kind, and deserves preservation.	******	*****	iia	Yes	251	No	10000
5	Ditto	Ohhiupur	Temple	The only laterite temple in nearly perfect order.	1 000	witer.	ia	Yes	2211	No	1995.03
6	Ditto	Bahulara	Temple*	This, as the finest brick temple in Lower Bengal, should be conserved. It is of brick plastered; the ornamentation is care- fully cut in the brick, and the plaster made to correspond to it. There are, how- ever, ornaments on the plaster alone, but none inconsistent with the brick ornamenta- tion below.	ANTONIC .	The mouldings of the basement are to a great extent gone, but fragments here and there exist.	ia	Yes		No	* This and the following are two of the most important and finest temples in the district.
7	Ditto	Sonátapan	Temple	The oldest temple undoubtedly in the Bardwan Division, and both architecturally and artistically well deserving of permanent preservation after thorough repair. It is a tall temple, solidly built of bricks, each measuring 12" × 8½". Thirty-three courses of bricks with the interposed mud cement make up 7 feet of height. The temple is remarkably solid, the dimensions of the sanctum inside being only 12 feet square. The temple was covered with plaster, and richly and profusely ornamented. The plaster has, however, come off in most parts.		The top of the temple has disappeared long ago and is now a shapeless mass of ruin, on which young trees are allowed to take root and flourish undisturbed.	iía	Yes		No	A00040

BARDWAN DIVISION-continued.

	District.	Locality.	Name of	Any local history or tradition regarding it,	Custody or	Present state of		S DESTRUCTION FORSILLS.	Whother pho- tographs, plans, or draw ingo of the

8	Bankurah	Ekteswar	Temple	The temple is remarkable in its way. The mouldings of the basement are very bold and fine, though quite plain. The temple was built of interite, but has had sandstone and brick additions made to it. There are traces of three different restorations or repairs. The first was a restoration of the upper portion, which had apparently fallen down. In the restoration, the outline of the tower and general appearance of the temple, before its dilapidation, appears to have been entirely ignored, and a new design adopted. After this, repairs on a small scale were carried out, of which traces are to be seen in various patchy portions of brick and mortar; lastly, a series of brick arches were added in front of the temple.		Kept up by the Pujacis.	18.	Preservation is desirable:	No

	4. 12			Temples Nos. I. and 2 are precisely like each other. As they stand at present, they consist of a simple cell each, surmounted by a tower roof, but there are traces of a Mahamandapa in front of which all but the foundations have disappeared. So far as can now he ascertained, each temple consisted of a cell with its doorway; an antanala, formed in the thickness of the back wall of the Mahamandapa; and a Mahamandapa, about 131 feet square. One of the temples is inscribed. The record is engraved on the right jamb of the entrance or doorway of the sanctum. It is in two distinct pieces—one of 111 lines, the other of 21 lines, both in a variety of the Bengali character. From the style of the characters, the temples do not appear to date to beyond the Muhammadan conquest, or at the earliest, to just before. The inscriptions are not dated. One of them mentions the erection of the temple by one Harisahandra (Raja?) for his beloved; but who Harisahandra was, or when he lmilt the temples, is not mentioned. The temples are particularly interesting, as being the finest known examples of their type Temple No. 3 stands by itself. It, like Nos. 1 and 2, consists at present of a single cell, but, unlike them, it does not appear to have ever had a Mahamandapa in front, as the mouldings are curried round to the very entrance of the sanctum. Unlike them, too, it does not face east, but due west. In other particulars it is similar to them. Close to this temple, and facing it, stands tample No. 4. It is now inclosed, or partially so, within a contryard; but the walls of the inclosure are evidently later additions, as they cover up the mouldings of the temple outside on the sides. Divested of this wall, the temple consists of a cell and antarella or vestibule. It does not appear to have ever hed a Mahamadapa in front Externally the tower differs considerably from those of the other temples here, and though in bad order, surpasses them in beauty and

				richness. The sculptured details are however not so profuse or minute. This temple can- not be classed with the others. In design and execution it is essentially different, though the same in material; and if style alone be taken as a criterion of age, it should be much older than them.							
28	Bardwan	Barakar	Temple	This is the basement of an old temple of much interest and of a peculiar and rare arrangement of parts.		Only the base- ment and some sculptures now exist, but these are well worthy of preservation.	lia	Yes	ire	No	
29	Ditto :	Devisthan, near Barakar, sub- division Rani- ganj.	Temple	Tradition says that a Rohni Deoghar Brahman once saw a jewelled arm rise out of the waters in the adjacent nalla; he went and informed Raja Kalyana Sinha of Kāsipur, Pachet, who came himself to see, and saw the prodigy. At night the goddess herself appeared to him in a dream, and pointing to an irregular stone, somewhat like a rude argha, said—"This is my muriti, worship it." The Raja accordingly caused the temple to be erected, and the stone having been duly inscribed, was installed in the temple. As the Rajas of Pachet did not reside at Kāsipur till compartively very recent times, the temples cannot be old.	, gu White	919748	nı	No		No	
30	Birbhum .	Dubrajpar rocks in the Hetaus- pur estate.	Temples, mas- jid, forts.	There are no buildings or ruins of any great antiquity in this district. There are, however, some temples among the Dubrajpur rocks in the Hotampur estate, and the following is a traditionary account of their origin:—When Ram Chandra, the hero of the Ramayan, was about to attack Ravana, King of Ceylon, he found it necessary to throw a bridge across the straits for the conveyance of his troops. He necordingly drove in his acrial chariot to the Himaiayas, picked up what stones he needed, and drove back. As he was passing Dubrajpur, his horses took fright and tilted up the chariot a little, so that some of the stones fell out.	wi.94	*****	111	Ño .		No	Exploration is necessary.

Number.	District.	Lectity,	object.	Any local history or tradition regarding it.	present ase.	preservation.	Class	Remarks.	ings of the hullding exist.	Пеманка,
				There is another legend in connection with these rocks, to the effect that they were collected by Visva Karmma, the artificer of the gods, to erect in one night a second Kasi, or Benares, at the command of the god Siva. When, after having made the collection, he was about to commence the work, the day dawned, and he was obliged to vanish not choosing to expose himself to the gaze of the public. On the top of the highest rock, contiguous to the existing temple, Siva was believed to have dwelt, and the people used to worship him at its foot. A natural division existed between the top and the main rock, and, on the occasion of a violent storm, the former tumbled down, crushing a priest to death. The people ascribed the accident to a desire on the part of Siva to have a temple built for him, and so one Sankar Raj, of Dubrajpur, exected the temple over the fallen rock, which is still believed to be the image of Siva, and is regularly worshipped. There is another building in front of the temple, which was erected about 33 years ago by one Kena Ram Datta, of Dubrajpur. It is said that the man's wife having proved barren, he offered to raise a temple for Siva in case he was blessed with a son. His wish was granted, and he fulfilled his vow by erecting a temple in front of the former one. These two legends relate to the rocks as a group: there are also anecdotes connected with some of the separate rocks. There are two temples. The older one, which stands at the back of the other, contains a large stone, which is worshipped as Siva, and which is enclosed by four walls built close up to it. Behind this temple is a boulder, not very wide, but high, with its sides almost perpendicular. The boulder was originally worshipped as Siva, the presiding deity of the rocks. It happened that the prest, who had grown too old and infirm to ascend it for the purpose of daily worship, was one night visited by Siva in a dream, and was told—"You need not trouble yourself any more to

				get up the hill to worship me; my head will tumble down on the plain, and you can worship it there." The priest, on awaking from his sleep, went towards the rock and found that the top had actually fallen broken and was lying on the ground. He then built walls round the broken fragment, and thereafter worshipped it as Siva. A little to the east of this temple there is a hollow place on the top of one of the boulders. People say that it never gets dry, but contains water all the year round. Sira (wife of Ram Chandra once washed her head in it, and since then the water has been considered sacred. Close by is a place where she is said to have sat down. One of the wheels of her aerial chariot also left its mark on a boulder. Another boulder has a long line run across its surface, as if a narrow stream of water had passed over it. Tradition says that it was caused by Ravana while answering a call of nature. There are two rocks, called mother and sister. The former is rather flat, and the other, chaped like an inverted cone, is beautifully balanced on it. Besides the remains in the immediate vicinity of Dubrajpur, there are several other temples, masjids, and a fort within a few miles, of which nothing is known.						
31	Birbhum	Nagor	Temples	Numerous hot springs and temples here attract pilgrims from great distances, the chief object of worship being a symbol of Siva said to have been set up by Vakra Muni, and there- fore known as Vakeswar or Bakeswar.		******	111	No	No	******

39	Midnapur	Kesiari or Koin- sari in Mohar- banj, 300 miles south-west of Midnapur.	The fort and monastery of Karambera.	The outer walls are about 10 feet high, and inside is a complete row of cloisters about 8 feet wide. Iuside, at the east end, are the rains of a temple of Siva, with the Mahadeva, or image of Siva, at the bottom of a well, where it is still worshipped; while at the west end, inside the enclosure, stands a mosque, which is erect, but unused, the forthaving again passed into Hindu hands. On the west inner wall is a stone set into the wall with an Uriya inscription, partly obliterated, showing that this celebrated mosque was constructed by Muhammad Taher, in the reign of Aurangzeb, and that it was completed in 1102 Hijri. To the north is a deep and large tank, full of alligators, called Jogeswar Kund. Kesiari, now only known for its large tasks ar silk manufacture, was at one time a renowaed Mnghal tahsil or settlement, and the numerous mosques and houses in stone erected by the Mughals still remain in the so-called Mughalpara or Mughal quarter. One of them bears an Arabic inscription, showing it to have been erected in the time of Aurangzeb. It has since been entirely abandoned, but a stone figure of a Muhammadan King or Saint with a Persian inscription on it, of the time of that Prince, lies on the ground in the middle of the ruins. It is evident that when the Muhammadaus settled at Kesiari they dispossessed the Hindus of the Karambera, threw down the temple, and erected a mosque. Afterwards, being defeated by the Mahratias at a place named Mughalmari, which lies a few miles south, they abandoned Kesiari, and the Karambera returned into Hindu hands. The local legend of the Karambera is as follows:—Maharaja Kapileswar, of the Deb Itaj family of Orissa, built this temple, wherein he established the image of a Mahadeva, called Gagnueswar. It is said that this place was covered with woods, and that the Suvarnare-kha flowed through it towards the west. Here lived a king, named Bagh Raja, from whom is derived the name of the pergunnah Baghbhum. The cattle belonging to the Raja grazed on the		This structure has the outer walls built of laterite still almost intact.	iia	Preservation desirable.	No was	******

				fields on the western bank of the river. The berdsman, who tended the flock, was one day chastised by the Raja because one of the cows gave less milk than before. The herdsman privately watched the cow, and, following her close, saw her cross the river, and after taking an easterly direction, make towards a Mahadeva in that locality and pour forth her milk upon his head. This circumstance was communicated to the Bagh Raja, who brought it to the notice of Deb Raj Kapileswar, and the latter caused the Karambera to be built and consecrated to Gaganeswar, as the Mahadeva was called. On the north of the temple he also caused a tank to be excavated, and named it Jogeswar Kund. A mahant, named Ganjiya Maharaj, was appointed for the performance of the daily worship of the idol. During the time of the Muhammadans, one Abdul Samat, a reputed fakir, forcibly occupied the temple, killed some cows within it, and thus profaned its sanctity. He afterwards removed the idol of Mahadeva and built three mosques in the enclosure. From this time forward it is said that the Mahadeva forsook the temple and removed himself to Egra. The mahant and his consort, Bengaburi, also quitted the place. It is believed that by his supernatural power they were carried through the air towards the east upon a fan for winnowing corn; but the woman happening to fall down upon a shallow marsh, the mahant also alighted and stopped at a neighbouring village named Kulaseni, where he breathed his last. His status, cut out of a block of stone, still exists at Kulaseni, and is worshipped by many. The stone status of his wife, Bengaburi, is also pointed out over the village. In course of time the place was overgrown with thick jungle, which none could enter. One Banamali Panda, of Gaganeswar, in 1231 B.S., with the permission and assistance of Mr. Donelly, Collector of Midnapur, cleared off the jungle, and discovered in a

				well the image of Mahadeva broken in two. The Karambera, which is still standing, is a splendid edifice of stone. It is 200 cubits in length and 150 in breadth. On the western side of the wall an inscription in Uriya character is engraved on a stone, stating when, and by whom the temple was built. But many of the characters are illegible, owing, it is said, to the Muhammadans having scratched them out.		20,5413	Tal.	*****	No	A copy of the In- scription should be sent to the Govt. Epigraph- ist.
40	Ditto	Dantun, about 36 miles south of Midnapur and midway be- tween Midna- pur and Bala- sor.	Temple of Sha-malegwar.	At the entrance of the temple there is a statue of a large bull in stone, lying in front of Siva, and having its two fore-legs cut off, it is said by Kalapahar. It is said to have been creeted by the Bhojraja, but the date is not given. One account says that about 200 years ago Chaitanya Mahaprabhu, on his way to Jaggannath, brushed his teeth here, and from this circumstance the villags got the name of Dantun (tooth-brush). Another account asserts it to have been the capital of Bhojraja, the father-in-law of Vikramaditya, King of Ujain. It would, however, appear from the history given of Dantun by the learned Pundit Jadannandan, about 200 years ago, on the occasion of introducing himself in the Muktimandap (temple of salvation) in Jaggannath, that it is a village of old standing, and that its origin is not so modern as the legend about Chaitanya would indicate. In the district of Midnapur many interesting ruins are bound up with the history of several of the ancient families, the principal of which are, (i) the Bogri Haj, (ii) Nayagram family, (iii) Mayna raj, (iv) Tamluk family, and (v) Narayangarh family. Having been a horder land for years between Bengal and Orisso, Hindusand Aborigines, Mahammadans and Mahrattas, the district abounds with archeological remains, old ruined garhs or torts, temples, and tanks, to which stories of a historical or legendary character are attached.		This temple, which is dedicated to the idol Shamaleswar, is a fine one, and still in existence.			No

45.	Midnapur	Garhbilita	Seven large tanks.	The tanks are named Jaltungi, Indrapush-karini, Pathurihadua, Mangala, Kabesdighi, Ampushkarni, and Hadua. In each of these there is a stone temple in the centre, and they all lie towards the north gate. From their proximity to the north part of the fortification it is inferred that all of them were excavated in the time of the Chohans (1555 to 1610 A.D.).	222 9-	These tanks, with one or two ex- ceptions, are in a good state of preservation.	iiā	Yea	No		******
46	Difto	Satdaulla and Mughalmari, Dantun.	Remains in Sat- daulla and Mughalmari.	The village Mughalmari is so called from a great number of Mughals having been killed there in a battle fought between the Mahrattas and the Mughals, in which the former were victorious. It is about two miles north of Dantan, Satdaulla being five miles from Mughalmari. When excavating earth for the construction of the Rajghat read, several remains of old buildings were discovered in these villages, and numerous bricks and stones were dug out, showing that these places were once the residences of some ancient Rajas.		******	818	No	No		er man
47	Ditto	Dantun	Biddyadhar and Sarsanka tanks.	There are two large tanks—one in Dantun, called the Biddyadhar; and the other, about two miles east of it, known by the name of Sarsanka. The first is about 1,600 feet in length and 1,200 feet in breadth. It was excavated under the orders of Vidyadhara, the minister of Raja Telinga Mukund Deva. The other tank was excavated by Raja Sarsanka Deva, of the Pandava family, while on his way to Jaggannath. It is 5,000 feet long and 2,500 feet bread. It is said that there is underground communication between the tanks, by a tunnel made of stone about 7½ feet high and 4½ feet bread. The tank said to have been excavated by Raja Sarsanta Deva is obviously a reference to the great Sasangka, the enemy of the Buddhists, and the most powerful of the later Gupta Kings. Should exploration justify the legend, and any remains of interest be found, they would be of great interest and importance, and would justify their being placed in class in or iit, according to their state of preservation.			lii	No	No	- 100 (0)	Examination ne-

54	Midnapur Ditto		Temple of Bargbhima.	a depression, about eight or nine miles in extent, which was formerly subject to the overflow of tidal water from the sea; but the Rajos of Mayna erected embankments along it to keep off sea, water, and thus brought a considerable part of it under cultivation. This depression was perhaps a creek of the sea, which must have silted up in course of time. This supposition receives confirmation from the fact that by recent excavations in the villages Tilda, Jalchuck, and others, which stand near the depression, many things have been discovered at a depth of some 16 or 17 feet below the surface, which show that the place must have been a port or sea-side town in days gone by. The configuration of the country also makes this every way probable. iv. Tambik family.—Tambik figures as a kingdom of great antiquity in the sacred writings of the Hindus, and has been mentioned in the spic poems. The chief objects of archaeological interest in Tambik are its temples. The most famed are the temples of Bargbhima and of Krishnarjun. It is situated upon clovated ground, and its shape and construction are curtous. It is supposed that it was erected during the ascendency of Buddhism in India.		Although a long time has elapsed since its erection, no portion of it has broken down or decayed, except that in the cyclone of 1864 the pinnacle with the iron circular crest was blown down. The pinnacle was built of a single block of stone; but as no such kind of stone could be easily procured, the devotees of the goddess built a new pinnacle of brick masonry. 5.5	Midnapur	Tamluk	Temple of Krishnarjun.	It is ascribed to Raja Tamradhvaj, who is probably the founder of the second dynasty. It contains the statues of the two defield heroes, Krishna and Arjun, both of which are under the same roof and are called Krishnarjun. Tradition says that when Maharaj Judhisthir, with the object of solemnizing the Aswamedh Jagya for the purpose of absolving himself from the sins incurred by him during the war of Kurukhettra, where his friends and relatives had been slain, had set the consecrated horse at large under the protection of Krishna and Arjun, the animal wandered to Tamralipta, then the capital of a powerful and pious chief, named Tamradhvaj. The sons of Tamradhvaj seized the animal and detained it, whereupon a fight took place between them and Arjun, finding at length that there was no hope of success, asked Krishna, the cause, who replied:—"Arjun, the man with whom you have entered the arena, is a firm believer in Vishna, you cannot hope for success with him; you should therefore cease to fight and try to accomplish your object by strategy." Whereupon they both transformed themselves into Brahmans in appearance and went to the palace of the Raja. There Krishna pointed out to Arjun abmidant proofs of Tamradhvaj's devotion to God, and then they appeared in their original forms. The Raja, finding that Krishna, of whom the gods could scarcely obtain a sight, notwithstanding all the penances they performed for the purpose, favored the palace with his presence, considered that he (the Raja) had achieved the object of his life, and offered many prayers and entreaties to Krishna, who was much pleased with him. The Raja then prayed that he might daily see both Krishna and Arjan were made and consecrated. v. Narayangarh family.—The chief objects of archeological interest connected with the Narayangarh family are the fort itself, with its moats and ramparts.			iib	Yes		*****

				their power in Bengal for more than three centuries. When the Afghan Kings of Bengal established their independence, they transferred the seat of Government to Perusli, and, to build the public structures of their new capital, plundered every-Hindu temple that could be removed.						
				Peruah was shortly afterwards abandoned, and the royal residence was re-transferred to Gaur, which continued to be the capital of Bengal so long as its kings retained their independence of Delhi. Dr. Buchanan Hamilton is of opinion that the desolation of Gaur commenced from the time (about 1639 A.D.) when Saja Shah, brother of Aurangzeb, made Rajmahal the capital of Bengal.						
				The rains have been a quarry, not only for the brick houses of the neighbouring towns and villages, but also for the palaces of Murshidabad. The jungle still reigns supreme over the half obliterated rains of walls, forts, and palaces. In 1874 Government sanctioned Rs. 300 for the preservation of the rains, but the amount was expended only in clearing the jungle round some of the principal buildings						-
				The city proper, i.e., the part within the great continuous embankment, is 74 miles from north to south, and from one to two miles from east to west. The south, east, and west sides of the city were protected by natural defences, namely, the rivers Ganges, Mahanadi, and the junction of these two rivers. On the north an artificial bulwark was required. A line of fortification about six miles in length extends in an irregular curve from the old channel of the Bhagirathi at Sonatala to near the Mahamanda at Bholahat. The rumpart is about 100 feet wide at its base, and is mainly composed of brick.						
				In the western portion of the city there is the large Sagar Dighi, the most celebrated artificial piece of water in the district. It is

Number.							Sinas.	Remarks.	building exist.	
				Mr. Fergusson, the ground plan and the dimensions are exactly similar to those of the great mosque at Damascus. The east side, through which the building is entered by an insignificant door, is 500 feet long and 3° feet wide between the walls. This space is sub-divided by means of transverse brick walls and stone pillars into no less than 127 squares, each of which is covered by a small dome. The northern and southern sides are constructed on the same pattern, but being shorter, contain only 39 domes each. The height of all three is about 20 feet, including a broad ornamental cornice; towards the quadrangle they open inwards with arches, which correspond to the squares. On the outside are many small windows, highly decorated with carved tiles disposed in arches. The western side of the building, that which faces towards Mecca, is composed of a central apartment, the mosque proper, and two wings. The Nave is 64 feet from east to west, 32 feet from north to south, and 62 feet in height from the floor to the centres of the dome by which it is covered. It contains the usual niches on the western wall, towards which the worshippers turned their faces, and a pulpit. These are polished and highly carved. The southern wing is similar in design to the other sides of the building, and contains 90 domes. Its west front, however, is closed by a blank wall, in which are niches corresponding to the 15 rows of arches which here terminate the cloisters. In this wing the common people worshipped. The northern wing only differs in so for as it contains a raised platform for the royal worshippers. This platform, called the hid-shib-ki-takht, is supported upon thick columns, and elevated about eight feet from the floor. It is 40 feet wide and 80 feet long, and covered by domes of vary little greater height than those over the rest of the building. The adjacent wall contains four

Sumber.							Cluse.	Homarka,	building exist.	
				niches and two doors, which are minutely carved and ornamented with passages from the Koran. These doors, through which is the only entrance to the platform, communicate directly with a chamber on the same level with the platform. The chamber is 38 feet square, and has been covered by nine domes of an even height with all the others. The outer front of the west side, though rendered irregular by the projection of the chamber is the best preserved portion of the building, and has been the most highly ornamented. It bears an inscription which fixes the date of the ersection of the building by Sikandar Shah at A.H. 707, or 1307 A.D. The stone-work, which is 11 feet high, is quite plain. The brick-work surmounting it, which raises the entire height to 23 feet 5 inches, is sub-divided into minute portions, and is most elaborately carved. The doors and windows on this side, which are of stone, are the parts which have been exceuted in the best taste. They are of very different styles, having apparently been taken from different Hindu buildings. The carvings of the human figure upon the materials have been carefully obliterated by Muhammadan masons, but yet traces of them can everywhere be detected on a close ins pection. There is no calcarsous marble anywhere in the building. The rougher parts are of granite, out of a single block of which some of the pillars supporting the domes are hewn. The more polished parts are made of indurated potstone, impregnated with bornblende. It is the great number of small domes which form the peculiar feature of Pathan architecture of this period.

10:		Rajmahal	Masjid	no typical example, but because it is in such a dilapidated state that it would cost a larger expenditure than would be justifiable when so many other rains of historical importance and architectural skill lie all over the province uncared for through want of funds. It was once a masjid; but the curious point in it is that there are chambers at the back and sides, evidently intended as residences, and undoubtedly used as such. Mr. Beglar thinks that a set of vaulted chambers exist below, or at least that the walls and the whole building is buried to a considerable depth in accumulation of ruins and in later modifications of theres. The floors of the portion which he considers must have been used as a dwelling have been everywhere extensively dug into by people in search of treasure, but whether successfully or not is not known. The masjid may be roughly described as an oblocy building, about 220 feet long by 65 feet wide, standing und completely filling the west end of a court 220 feet wide and about 500 feet long, which was once arcaded or provided with niches along its entire inner face. A gateway at the cast endonce noble, now in picturesque ruin gives access to the court, which is overgrown with thorny scrub, and interspersed with tembs and pitfalls. The facade once consisted of five archways in the pointed Sameenie style, of 17 to 18 feet clear span, the central one being larger than the rest, and provided with a projecting demiportic with octagonal towers at the two corners. The protion was pierced by a noble archway 23 feet wide in space. Over the central archway ran a corndor with small windows terminated at either end by massive square towers, continuations upwards of the	Un- known. 				of the curved pattern which is so unmistakeable a feature, not only of the grand monumental architecture of Bongal Proper, but of every hut in that province, ran at a height of about 30 feet above the ground along the front and rear façades. It was broken at the great central arch in front and its corresponding projection at the back by the square massive towers and windowed corridor already mentioned as surmounting the central great archway. Four octagonal towers rise at the four extreme corners of the masjid, terminated by short flat domed tops and spires, and the domes between these on either side at the front and back and the projecting high central piece complete the façade. In the interior it is divided into a great central nave, 50 feet long by 30 feet wide, and two aisles on either side. On the outer sides of the aisles run a series of four small two-storied chambers intended probably for the female congregation, or possibly as residences or orntories for the officiating priests. In the thickness of the wall on the outer sides of these two-storied chambers, which form the outer north and south walls of the masjid, were stairs leading up to the upper row of chambers and on to the roof. The main nave is roofed by a noble vault running from end to cod, and screened from the front and back façades by the towers and windowed corridors mentioned before: This vault rises from a higher lovel than the rest of the roof of the building, and, being of the usual pointed style, rises to a great height (40 feet above the floor) above the domes which roof the aisles, and is a special feature of the constructive arrangements. The lofty towers and windowed corridors which serve as a serven to it in front and back, form commanding features of the exterior style of architecture, and, in the absence of any						northern half is a min inexpable of being repaired. Mr. Beglar epprehends that the shock of the spenteneous fall of the beavy arrhos and domes (which are tottering and must very soon give) will parhaps result in the destruction of the great vault testif the therefore recommends that those portions which cannot be trusted to stand without heavy repairs be discumiled, and that the rest be left strating. Care should, however, be taken to wood out trees that root themselves in the walls. The cost still runghly be — 125 × 65 = 8,125 Ha. square feet, at Ha. 30 per 100 square feet, at Ha. 30 per 100 square feet, at Ha. 30 per 100 square feet tons likely to stand, tump same 150 Jungle cutting and patty repairs to gote seed walls, lump same 150 Total 2,737 Continguacies at 10 per cent. 273 Total 8,600 or, say roughly 8,600

						inscriptions, its date may, with fair certainty, be fixed at the first half of the 14th century A. D. The aiales are cut up, for convenience of roofing, into squares by cross-shaped pillars, and covered by dones of about 21 feet diameter. They spring at a lower level than the great vanit. Lastly, the four two-storied chambers at either end are covered by four corresponding small domes at each end, also rising at a somewhat higher level than the domes of the aisles.								
						It will thus be seen that the lines of the façade are not only broken up with considerable artistic skill in plan, but also, and even more boldly, in elevation—a feature which soon ceased to characterise Muhammadan buildings, as their power and the corresponding art talent in their kingdom decayed.

		Hazaribagh	Mahaudi Hill	Temples	There are four rook-cut temples at Mahaudi, three being close to each other, and the fourth on the far side of the hill, about two miles distant from the others. The first three consist of rectangular rooms from 5 to 8 feet long and broad, and from 5 to 6 feet high, cut in large sandstone boulders, with small ogee-doorways about 4½ by 2½ feet cut through square sunk panels. The ceilings and floors are flat solid stone. One temple had a carved sun-flower in the centre of the ceiling of the room and of the overhanging porch; also two small sun-flowers in the spandrils of the doorway, and an elephant on one side,—all cut in relief. Another had no ornament at all; while the third had string and cornice lines of ogee shapes projecting altogether about four inches from the face, a niche on each side sunk in the rook, and a lily over the doorway in relief. The outside of the boulders were quite rough, except in the most ornamental temple, and this was shaped round, with a ridge resembling an inverted boat, the ridge being the keel. Inside they contained some remains of the linga ornament, and one had three niches in its walls. There were no inscriptions on any of them. One is brewn outside, the others quite black. On the whole, they are very plain and rough, and have very little claim to be considered architectu al remains. They are curious, and that is about all that can be said for them. The fourth temple is in general appearance similar to the rest, being cut out of sandstone rock, but somewhat larger. It has three square rooms—a central one, with a room on either side entered by square-headed doorways.			- ia.	Yes	No

				tower on the west front, and four square corner towers, with straight battlemented walls between them. It was admirably adapted for the warfare of pust times, being situated on a tongue of land which projects into a basin surrounded by hills, except on the east-side, where it commands a gorge. On three sides it is virtually inaceessible, as the land shelves off abruptly into deep ravines holding nalas in the rainy season. On the west side alone is there anything like a feasible approach, and even here one has to descend into low ground before using to the level of the guteway. The site appears, therefore, to have been carefully selected for purposes of defence. On approaching neuter from the west, the appearance, architecturally, is rather disappointing, being plain and poor. The central tower is about 30 feet wide by 40 feet high, rising on one side to 50 feet, and projecting about 20 feet from the main walls, the tops of which are about 25 feet from the ground. The entrance gateway, now fallen down, was on the north side of this tower. Passing on a second gateway in the west main wall is traversed and the enclosure is reached. The four walls are flanked by towers 20 feet square, projecting at right angles, like the central tower, about 15 feet, and facing each other. Two of the corner towers are of the same height as the main walls, and two are about five feet higher. The walls are stopped at each tower with the falling ground on which the fortress is built, being highest on the west side, about five feet lower on the north and south, and five feet lower will on the cast, in which there is a small postern gateway with masoury steps outside leading down to the valley beneath. The buttlements of the walls, where perfect, have two irregular rows of small square loopheles, one just above the string course, the other about two feet higher, and as much from the top of the walls, so that the defenders could fire over the walls from

				the level of their feet and from an intermediate height, i.e., standing up sitting, and lying down. The central tower has three distinct tiers of loopholes, two of which are square and one long, beneath the lookout or side donjon tower, which is also square and long, and loop-holed for archery or musketry. The corner towers have two tiers of loop holes, one of which is long, the other square. These towers appear to have had floors and roofs, traces of which now remain, and to have entirely housed the garrison, as no signs of buildings are to be seen elsewhere. They contain small masoury circular staircases, approached from the courtyard, giving access to the several rooms, and to the tops of the walls. Inside the fort the ground is irregular, and appears to have contained no buildings. It is now overgrown with jungle. Perhaps the most curious object in the fortress is the well, which is beneath the northwestern tower and is approached by a steep subtarraneau masoury staircase archod overhead. The month of the well is about 30 feet below the ground level, and six feet in diameter, but is now completely filled up with earth and masonry rubtash. Architecturally the fortress is decidedly poor. A pair of small common-place half ortagon limestone shafts remain on one side of the main entrance, and this is with the exception of a few stone steps all the cut work about the place. The other doorways are square, having wooden lintel heads. The buildings and webs are composed of small irregular pieces of limestone, with brick string courses and battlements. The whole was once apparently plastered, but this has now for the most part were off, exposing by no means a good specimen of rubble masoury.

				of the caves had still, when Mr. Beglar saw it, traces of painting which cannot be later than the paintings in the Ajunta caves of Bombay, and may be earlier. The natural tunnel under the hill, through which rushes a small rivulet, is noticed in the Ramayana (Griffith, Volume II, page 205, Bk. II, contd. LIV, and Volume II, page 389, Bk. II, contd XCVII), as well as the cave of Sita (Volume II, page 382, Bk. II, contd. XCVII); it is also noticed by the poet Kali Dasa (Wilson's Translation of the Meghaduta as well as the Raghavansa, yet untranslated). Mr. Beglar does not see what can be done at a small cost to save the caves from being appropriated and blackened by the fires of wandering fakirs, beyond surrounding them with a high iron railing provided with a door which may be locked. The main track from Bisrampur, the capital of Sirguja, to Bilaspar, the head-quarters of the Bilaspar Division, Central Provinces, passes within five miles of the hill, and a small branch to the Ramgurh hill would not cost much, and would render the place accessible. On the hill itself and on its slopes lie mmerous pieces of sculpture, some unique, all dating to the early Brahminical revival period, about the 3rd century, and a plain temple dating to the later period about the 9th or 10th century. 46	Manbhum	Telkupi, on the Damuda near Chailiama.	Temples	The entire fort is now full of dense low jungle, with the exception of small patches of cultivation in what before were tanks, but are now filled up. There was a deep most round, outside the external rampart, through which the hill torrents coming down the sides of Pachet Hill were led; parts of it are filled up, others deepened. There are three lines of ramparts and mosts, each something in the shape of an irregular pentagon. The second and third or innermost ramparts and most are now so full of dense thorny jungle, that it is impossible to discover the ruins of structures in the innermost area. There is a fine large temple up the side of the hill, where a large gathering of people takes place annually. It is regarded as a very holy place by the people of the district. The ruins of these temples are the most extensive in the whole district. The river has gradually been encroaching on the high bank on which the ruins stand, and temple after temple has fallen down. Huge blocks of stone, fragments of idols, carved ornaments in stone, all lie heaped up promiscuously in the bed of the Damuda, and their traces are being gradually obliterated by accumulations of sand. These temples are all of etone cut with great care, in immense blocks, and set with very fine joints. There is no mortar whatever. Some of the temples are plastered over. This appears to have been done to obliterate the carving in the stone, with a view to substituting a different design. The original carving appears to have been excented after the stones were in position. The figures are plain and bold. The subsequent carving is different both in figure and style. The temples are now in the hands of Brahmins. The dates of the original temples can not be ascertained from any records there, as no inscriptions exist on them. All the		Partly neglected, only two occasionally repaired by Raja of Pachet:		Yvs	No	This is the most pa- morous more extensive, and one of the most interesting group of temples in the Division. They are close to the bank of the river and are most pictorisapine. The remains new counts of a compact group of 13 tem- ples standing in a more or has neglected state, and of 14s runns of numerous others in various anges of dis- truction. Besidus these there are in and about the village aight other temples in toler able preservation, and the runns of numerous other buildings, momes tories, voltice temples, i.e. All the temples were substantially built of out stance, some pain, some subprured all more of bias erammen- ted with scappure aither on the stone if- self or on the soas of chemic of region and of chemic of the situation of overcoment to the organic attention of Gevernment to the

Number							Class	Remarks.	building exist,	
				openings, if small, are slabbed over, the larger ones being covered by corbelling out. The domes are all constructed by corbelling out. There is only one arch in the place, which appears to be a later addition. There are mortar joints both in the arch and in the wall which appears to have been built to separate the temples: those on the north of the wall are now being used as places of worship, and those on the other side have been abandoned.						remains. He has him- self some one temple, submarged in the river, and the numerous mins in the river-bad attest the dostruction of sever- al others. To preserve the great and most important group from inter destruction, the construction of spars in the river beasenful; and as stone is ready at hand both from the rules and from the rules and from the rules appears would enti- cically protest the entire spars would enti- cically protest the entire site from being submerged. Mr. Bealur
										proposes that they should be built merely at dry stone thrown in, and the sides roughly formed to a slope of 1 to 1: total length of spure, 600 feet. Height at extreme end in river, itseluding formathion, 4 feet; at land end, 20
										icoluding foundation, a feet; average 12 feet, breath average, 57 feet. Total cubic contents, 43,200 exhib feet; at he 4 per 1100 cubin feet finished, including setting and carriage, Rs. 1,738, any Rs. 1,750. The conservation of the temples throughout the setting and carriage.
										jungle-cutting; in others it will include
										excevation and eleating of accumulated rubbish and water tightening. In no case is it proposed to restore. For water-tightening h is proposed to use a cost of grey coment, after al-
										solutely needful repairs. The repairs to the twenty-sam temples at an average of R 200 each, will cost Rs 4,290 add for excavation and image clearing Rs 1,055 making a total of Ra 7,000. This is, considering the importance, the extent and the least to least of this, the freet repairable group.

										of stone complete in the division a small enthay, and it sourt not be overlooked that nearly a foorth of the mathy will help to protect from the river, not the temples alone, but she hand on which the river is slowly on-creaching. The temples range in age from puebably the 5th century to the Thirt shey were ownered years of the Thirt shey were during. Manyloghe governmently repaired once during. Manyloghe governmently and again at soons subsequent period. The temples are almost all Rushummers, both Valenarie and Sarrie, but it is correction that one of the flasest and probably one other, was Jein. Mr. Berber dams soft think tours were any Busichist temples among them, but the rainest monactery shows that Rushilmer strains and the flases strained at the flases of
47	Manbhum	Dalmi, on the Subanrekha river.	Fort and temples.	There are the remains of a fort, the grassgrown mounds of many temples, and one brick temple that is still standing. Being of small size, in fair order, and a type of the smaller brick temples of the district, it well deserves conservation, and would serve to house the numerous exquisitely carved sculptures which lie scattered over a space of about two square miles, exposed to the weather under village trees and on mounds. The choicer ones may be removed with advantage to the Calcutta Museum. There is also a fine tank, within which stands a stone chattri, which also well deserves preservation, though the work can be economically taken in hand only in a season of unusual drought. The fort needs no conservation, but would yield bricks with which to repair the temple.		Decaying	ier	Yes		Cost of commerciation of function of function of function of commerciation of conservation of charteri

-51	Ditto	Sufaran Suissa Decli.	Ruined temple and sculpture.	There are numerous sculptures, some of equisite finish. They probably date as far back as the 7th century A.D. The remains of one stone temple, of which the sanctum is yet intact though the tower has fallen, deserves conservation, and would at the same time serve to house the sculptures. The sculptures are Jain as well as Brahminical, and some are exquisitely finished.		Temple in raina Sculpture ex- posed to weather.	Ĭa	Yes		Yes .	. Mr. Beglas must strongly recommends the occuser-vation of what yet exists of the stone temple, which was enex a magnificent structure. As there is no want of out stones lying about, the cost would be small compared with its interest and importance. Conservation of temple, including enhumation of buried portion 800 Carriage of sculpture
52	Ditto	Banda near Chai- liama.	Temple	No	Ditto	Neglected	108	Yes	40	Yes	There is but one temple here in fair order and worthy of preservation. It is in some respects remarkable; but, as regards the great runnel pillared hall in front, Mr. Reglar is now of opinion, in opposition to his previous opinion expressed in Volume VIII, Archaeological Reports, that it was, at least in part, a later addition. Examination with the aid of excavation can aloue decide the point deficitely. Be this as it may, the temple proper, consisting of three tiers of openings, is abnormally tall, and in this respect differs from others of its class, and approaches the templeof Bushin Cays; but in external form it differs from it it possibly is a specimen, and a rure one, of a transition style. As the templeof style, As the templeof style as the proper needs but little to keep

53	Manbhum	Buram	Temples	No tradition	Neglect- ed.	Going to ruin	ia	Yes	No	Some of the first temples in the division.
54	Ditto	Pakbira, 20 miles north east of Bara Bazar.	Temples, sculptures, and slate monuments.	This little known place is one of the richest in Manbhum in objects of interest, a space of 300 × 350 feet being covered comptely with temples in all stages of decay. Of these a few are past repair. Some are not of sufficient importance to be repaired. It will be enough to secure details of measurements and photographs; but certainly one, possibly two, as typical examples have strong claims to invourable consideration. The numerous heaps contain a wealth of sculpture to be found perhaps in no other spot in Manbhum, and Mr. Beglar very strongly recommends a thorough examination. The sculptures are Brahminical, Buddhist, and also Jain. They range from probably the 8th or 9th to the very latest period when Buddhism flourished in Bihar before the Muhammadan conquest stamped it out for ever; and in the yield of rare varieties of sculpture of the latest period it is, he believes, richer than any other place in Manbhum, and perhaps in Bengal. For these reasons he assigns a comparatively large sum to examination not only of this, but of the nine other places in its immediate vicinity, siz. Lathondougri, Dhadki tunr, Tuisama, Buddhpur, Bangaon, Poncha, Sagnibassa and Kharkiagarh. Some of the rarer sculptures, both of those above ground and of those which he expects are yet buried, should be removed to the Calcutta Museum. The others may be placed within the repaired temples for safety. Of the numerous aboriginal monuments of the dead, there can be little doubt that examination and excavation would yield results of great inter-	Un-known. 				the 16th centuries, Sonargaon was the capital of an independent monarchy. About the 16th century, the city awarmed with pirs, fakirs, and other religious mendicants to a greater extent than perhaps any other Indian city. Amidst the ruins and forests of modern Sonargaon it is said that at least 150 'gaddis' of fakirs are distinguishable. The following is a description of the old buildings of Sonargaon.						
16	Daoca 3:	Sonargaon	Panch Pir Dargah, in Mahalla Baghal- pur.	The sepulchres of the five pirs are placed parallel to one another, and are raised about four feet from the ground. The river Brahmapatra must in former days have flowed past them. It was at one time intended to cover the tombs with a roof, but the pillars were never raised more than a few feet. The age of these graves, the names of the holy men, and the country whence they came, are unknown; the belief is that they came from the west. At the south-west corner of the enclosure is a small uninteresting mosque, which, like the tombs, is rapidly falling into rains. This dargalt is considered as mered that even Hindus saluam as they pass, and Muhammadan pilgrims resort to it from great distances. There are only two other shrines to which	1901	In a very rainous state. The wall surrounding the enclosure has fallen down in places, and several large jungle trees grow close to the tombs, and will ultimately destroy them.	iii	Not desirable	No	Exploration need-ed.
	The same of the sa	Ditto	Tombof Chyas-	Muhammadans make pilgrimages in Eastern Bengal,—one is the tomb of Shah Ali at Mirpur, a few miles north of Dacca; the the other is the dargah of Pir Badur Auliya, at Chittagong. 				This latter is called the darpah of Khwand Kar Muhammad Yusaf. It contains the tombs of the saint, of his father, and of his wife. It consists of two clongated dome roofed buildings, each surmounted by two pinnacles or kalas, covered with, or formed of gold. These tombs are destitute of any ornament inside. They are kept scrupplously clean, and are covered with sheets, on which devotees throw a few pith necklaces. When a ryol his reaped an unusually abundant harvest, he presents a few bundles of ripe rice at the tomb in token of gratitude. If any calamity, such as the illness of a member of his family, is threatening, he brings rice or batasa, and prays the saint to evert the affliction. Hindus are as confident of the efficacy of this propitiatory offering, and as frequently employ it, as the Muhammadans. Close to the tombs is a modern masjid, with a khutba, or inscription, dated A. H. 1112. It was probably erected by the pir Muhammad Yusuf. Facing the mosque is a small graveyard enclosed by a brick wall. The graves are numerous, but none are of any importance. Inserted in the wall, at the left hand side of the entrance, is a large black stone, measuring two feet by one and a half. The natives believe that if a person has lost any property back. It was covered with an inch and three quarters of lime when examined in January 1872. On scraping off the plaster a beautiful Tughra inscription* was found, with the name Jahandin Fatch Shah, A. H. 889. This is the oldest inscription discovered in the Dacea district, with the exception of the one on Adam Shahid's tomb in Bikrampur, which bears the same king's name and the date A. H. 888. On the readside, near Maghrapara, are two other inscribed stones. The writing* on both its continuous. It includes the name and title of Alandiin Husain Shah, A. H. 919.						Copy of these should be sent to the Government Epigra-phist.

				Close to the temb, above mentioned, is a ruined goteway, called the naubatkhana where musical instruments were sounded morning and evening to announce to travellers and fakirs that a place of shelter was at hand. At the back of the mosque are the ruins of a house called the tahbill or treasury, where feasts were given by the Saperintendent or mutawalli of the mosque. The present holder of this post is too poor to entertain anybody. Still further to the north-west are the ruins of the dwellings of the Khwandhars. It is only within late years that this building, which had an upper room at each end, has become uninhabitable. The last residents taught boys to recite the Koran.						
19	Daces	Souargaon	Shah Abdul Alu's tomb.	In the muhalle north of Maghrapara, called Gohatta, is the tomb of a very celebrated pir, known as Shah Abdul Ala, alias Pakai Dewan. It is narrated that he retired to the forest, where he sat for twelve years so absorbed in his devotions that he was unconscious of the lapse of time. When found he had to be dug out of the mound him, and which reached to his neck. The same story is told of the sage Valmiki and of others. This pir must have died near the end of the last century, as persons now living remember his son, Shah Imam Bukhsh alias. Chula Meah. Father and son lie buried close together. At the head of the grave of the former is placed the stone lattice on which he spent his twelve years of meditation. The tombs are otherwise of no interest. They are merely heaps of mud kept carefully clean and covered over with a grass thatch. In this same quarter a very large mosque formerly stood, which fell into rums, when the proprietor sold the bricks to the Hindus of Narainganj. Muhammadans extenuate this offence by asserting that the proprietor, who was a pensioned Deputy Magistrate,	Tagrita		iii	No	No	Exploration desirable.

				was insane when he did it. Even the foundations have been dag up. The walls were eight feet thick. The remains of one of the mihrabs still standing prove that the interior was ornamented with carved bricks. No inscription is to be found,							
20	Dacca	Sonargaon	Yusufgenj Marjid.	On the roadside, east of Maghrapara, is a small mosque called the Yusufgonj Masjid.		Rapidly going to pieces, as the dome is covered with masses of pipal trees, the roots of which have penetrated into the interior. Its walls are six feet, one and a half inches thick, which accounts for its standing so long.	ш	No	kee	No	Drawings and photographs desirable.
21	Do	Ditto	Tomb of Pagla Salab	Beyond the village of Habibpar, on the right hand side of the road, is the temb of "Pagla Sahib," a very insignificant building. Various stories are told of the reason why this pir received such a singular name. One is that he became mast, or light-headed, from the intensity of his devetions. Another, that he was a great thief-catcher, who nailed every thief he caught to a wall and then beheaded him. Having strung several heads together, he threw them into an adjoining khal, which has ever since been known as the munda mala, i.e. "necklace of heads." This temb is so venerated, that parents, Hindu and Muhammadan offer at it the chonti or queue of their children when dangerously ill.	*****	*******	iii	No	***	No	******
23	Do	Ditto	Gharibulla's Mosque.	In a quarter near this, called "Bari Makhlar," is a comparatively modern mosque erected by Sheikh Ghazibulla, formerly a jachandar, or examiner of cloth, to the East India Company. It bears the date A. H. 1182, and it is still used by the Muhammadans	,,,,,,	194101	111	No	41)	No	bošini.

33	liitto	Kishureganj	Temple of Lakhingrain and other buildings.	This temple, consisting of 21 buildings, was erected about the year 1770. Other buildings also were erected about the same time dedicated to the use of Lakhinarain, and were known by the names of Dolemandir, Jaltangi (summer house), Rashbari, Durgamandir, Sivamandir, and other small temples. Four tanks were also dug. One of these tanks was large, 265 yards in length by 142 yards in breadth. It is situated on the east of Lakhinarain's temple. The Jaltangi, a three storied building, rises from the bed of the tank and adjoins the west bank. Between the Jaltangi and the temple is the Dolemandir. On the east bank is the Sivamandir. The temple of Lakhinarain covers an area of 9.216 square feet. There are two inscriptions in Sanscrit on the hig temple at a considerable height from the base. Some of the lefters are obliterated.	41117	Two of the buildings are in ruins.	711	No	***	No		*****

1	Balasur	Village of Kopari, at foot of the Gazia hill, Nilgiri range.	Mahratta temple.	The only important object of antiquarian interest in this district is the remains of a building supposed to have been a Mahra ta temple in the little village of Kopari, situated at the foot of the Gazna bill of the Nilgiri Range. The body of the structure is about 30 feet long by 30 feet broad, and consists of a rectangular basement of blooks of laterite, on which has been erected a range of pillars, four on each side and two at each end. Six of these pillars are still standing; they are about six feet high, and have each been hewn out of one block of stone. At one end there was a portice or entrance of a similar structure, but none of the pillars now remain standing. At the other end of the centre building there was an inner temple, probably the abode of the god or goddess, which is also completely in ruins. On the north side of the ruins there is a small tank of considerable depth; about 25 feet by 25 feet, with a flight of stone steps leading down to it, all hewn out of the solid rock. At some little distance south of these ruins is a mound of considerable extent, now overgrown with jungle. Nothing is visible but two large sentry boxes of large blocks of laterite. To the west of the ruins there is a large tank, on the banks of which there is what the narives call a padmapad. It is a little building about three feet high, covering a stone impression of some goddess's feet, which is very distinct.		(** *) * 1 * (* * * * * * * * * * * * * * * *		No	No	Exploration desirable

Nanther.	1						Chass.	Romarka	building exist	
				flat, and the head dress is of a most peculiar kind, something like what one sees in old Egyptian sculptures. The hair is corly, and the cars are large and pendulous. From the chin to the waist is about 4½ feet. It is 5½ feet across the upper part of the breast, and the whole figure must have been 18 or 20 feet high. The stone is not the mugni or chlorite slats, of which the other colossal images near Jajpar are made, but a coarse reddish granite. The nose is broken off.						
4	Kattak	Chandeswar, Jaj- pur.	A monolith	This is about 22 feet high, and stands on a pedestal made of three enormous blocks of stone, each about five feet long, five feet broad, and about two feet thick. The monolith itself is 34 feet square at the bottom; it is bevelled off for some inches at each corner, and then rams up into a fluted shaft for about 20 feet. The circumference of the column where the fluting begins is over 11 feet, and the height is thus about six diameters. On the top of the monolith is another enormous stone over six feet high wrought into a regular capital. The lower part of the capital is round for about 4 feet up. On this garlands are sculptured; then the stone is cut into the shape of a lotue calyx, on which the upper portion rests. This upper portion forms a square of about 4 feet, and locks as if intended to support a statue of some sort. About half a mile from this column is found the sacred valtant of Vishnu [garud] which the column is said to have supported till the time of the Mughal invasion, when Kalapabar pulled it down with some difficulty. The Mahammadan General attempted to pull the column down by chains and teams of clephants, but failed. The enormous capital of the column appears to have been moved an inch or two from its position, but the monolith remains as firmly fixed as on the day it was set up. At the corners of the square part at the bottom of the monolith holes have been drilled, as if for			Ĭri	Yes	A drawing of it exists in the J. A. S. B.

Number						\$12277	Ches	Hemorks,	building exist.	
				ropes or chains to pass through. This column is really well scriptured, and the workmanship shows a considerable advance on that of the statue of Buddha. The garud, which is said to have crowned this column, is in a pakka thakurbari about half a mile from Chandeswar. It stands on a sort of base, corresponding to the capital on the top of the monolith. This base is about three feet high and of one block of mugni stone. At its lowest part it is round, about 9½ feet in circumference, and adorned with sculptured heads of lions. Over this the stone is, like the capital of the monolith, cut into the shape of a lotus calyx. This is 12 feet in circumference. The stone then is left a square platform. On this platform, four feet two inches square stands the garud itself. The figure is in a kneeling position, and is four feet high. It is fastened down to the square platform with lime. There can be no doubt that the base on which this figure stands belongs to the monolith in the four corners of the platform holes are drilled exactly as in the corners of the monolith and its capital.						
5	Kattak	Jujpur	Three images of Kali, Va- rahini, and Indrani.	Of these and of the seven figures in the gallery on the river bank, Stirling, in his work on Orissa, pages 37 and 38, gives the following account:—	1	APP (PT -	411			
				At the back of a high terrace supporting the cenotaph of Syad Bekhari, a Mussulman Saint, three colossal statues of Hindu divinities are shown. They lie with their heels apparmost on a heap of rubbish, in precisely the same position apparently as they assumed when tumbled from their thrones above by the Mussulman conquerors of the province, who destroyed a celebrated temple at the spot, and further descrated it by erecting on its rains a shrine and mesque for their own worship. The images are cut in alto-relieve, out or enormous tlocks of the indurated		*****		Preservation de- sirable	No	The figure collect that of Varahini is more probably that of Vajra Varahi of later Buddists. The removal of the figures to the museum appears desirable.

They represent Káli, wife of Siva, Varáhini, the wife of the Boar Avatar (incarnation of Vishnu), and Indrani, the wife of Indra; and though the subjects are grotesque, the execution is distinguished by a degree of freedom, skill, and propriety, quite unusual in the works of Hindu sculptors. The first is a disgnsting, but faithful representation of a colossal naked body of a female with many of the muscles and tendom exposed to view. Her hair is brushed back under a snake fillet, with a death's head over her forchead, and the distended hood of the colora as a canopy above. Her serpent tresses fall down in twisted horror over her check. An endless string of skulls winds round her neck, her breast, and her whole body. She sits upon a kneeling diminutive figure of her husband, Mahadev, and the whole rests upon a lotusleaved pedestal. The second has a boar's head and a huge pot-belly like that of Ganesa. Magnificent bracelets adorn the wrists and shoulders of her four arms. Heavy necklets almost hide the bosom and waist, which her drapery leaves half bare. Bell-bangles encircle her ankles, crescent-shaped ear-rings depend from her ears, and on her head she wears a jewelled tiara, with the hair done up into a tower of curls, and a heavy tress falling upon each shoulder. She sits on a finely-carved baffalo. The third sits in calm majesty with an admirably-cut elephant as her footstool. A muslin drapery (sari) falls in delicate curves to her feet, and is fastened by a girdle at the waist. Elaborate ornaments cover her breast, and her hair towers up in a cone of curls interwoven with rich gems, with a single massive tress hanging down upon either shoulder. On the banks of the river there is a sort of raised gallery filled with mythological scalptures, amongst which seven large colossal	presunt use. 				figures of the female divinities, called Matris, are particularly remarkable. They are said to have been recovered lately by a mahajan out of the sand of the river, where they were thrown by the mughals, on the shrines being destroyed. This mahajan built the edifice in which they are now deposited. They differ little in style and dimensions from those described above, but appear to be cut out of blocks of basalt or green stone, instead of chlorite schist. They are styled respectively Káli, Indráni, Kumari, Rudráni, Varáhini, Varáhini, Vaishnavi, and Yama Mátri. The figure of Káli is sculptured in a very spirited manner. She is represented with an axe in one hand and a cup full of blood in the other, dancing in an infuriated attitude, after the destruction of the giant Raktavija, and trampling unconsciously on her husband, Mahadev, who, as the fable runs, had thrown himself at her feet to solicit her to desist from those violent movements which were shaking the whole world. That of Yama Matri, the "mother of Yama," is also a very striking and remarkable piece of sculpture. Her form is that of a hideous, decrepit old woman, scated on a pedestal, quite naked, with a countenauce alike expressive of extreme age, and that sourness of disposition which has rendered her proverbial as a scold. There are likewise fine representations in this mythological gallery of the Narsingha Avatar, and the giant Rávana, with his numerous heads and arms.			īla:	Preservation desirable.	No	These figures deserve preservation and should be placed in the museum. Some of them would be unique, as there are now no examples of this description.

On this projection is the temb of Syad Bokhari All round the wall on the west side of the terrace are niches about 34 feet high. They are something in the shape of Gothic arches, and are possibly of Mussalman construction. The archeological remains of the Kattak district are for the most part confined to the ruins						
1		200.000	Jajpur	*****	at Jajpur and the antiquities of the Alti hills. Jajpur is said to have been from the earliest times a place of importance, and, after Puri, by far the oldest town in the province. At						
					a place called Narpada, about two miles south east of Jajpur, there is a mound covering the rains of the palace of the founder of the Kesari dynasty. It is possible that excavations here might bring some ancient remains of value to light Asari Bhim Deo, the second and by far the most emineut of the Ganga dynasty, who is said to have ascended the throne in 1174, is stated to have held his court permanently at Jajpur during the earlier part of his reign. During the period from this time to about the middle of the 14th century, the best of the ancient remains at Jajpur were most probably constructed. In 1558, during the reign of Mukund Deb, Kalapahar invaded Orissa, and the battle field is still shown near Jajpur, where the Mussulmans obtained the victory. Kalapahar then threw down the colossal statues of the Hindu gods, which have now lain prostrate for nearly three centuries.						
					The most important of the antiquities of Juj- pur, arranged in order of time, are the following:—						
	a	Kattak	Ditto	Bridge at Tatulmul.	This is a very peculiar eleven-arched bridge not far from Jajpur. It is similar to the one called the Athara Nala bridge near Puri,	3,	******	ii(a)	Yes	No	Road Cess to keep it up.

				the arches being formed entirely by corbelling or making each successive layer of masonry overlap by five or six inches the layer below, until the two piers come at the top to within a foot of each other. On this space a long narrow block of stone is laid as a sort of key-stone. Over the key-stone, transversely, enormous blocks of stone, some of them 4½ feet long and half that in breadth, are laid apparently with the view of making the upper layer of the piers on each side grip the key-stone. Each of the layers is formed of stone about a foot thick. The lower half of these stones, at the openings or arches, is bevelled off for about six inches, the upper half being perpendicular. In this way each side of the arch resembles an inverted stair with the edges of the steps worn off. The whole bridge is about 240 feet long and 32 feet broad, and each of the piers is about 10 or 12 feet wide. The arches or openings are small near each end of the bridge, and become larger in the middle.						
				The height of the central openings is about 9 feet, and the width about 10 at the bottom. The smallest openings are 5 feet high and 6 feet wide at the bottom. The abutments at each end are of laterite; in the centre the masonry is of coarse red granite. In the highest arch there are about 12 tiers of masonry above ground. There are two points, however, in the bridge which tell somewhat against its antiquity. The first is that in various parts of the piers and under the openings or arches one notices stones which have evidently formed parts of another and older structure. Here and there one notices on the stones hits of chequered carving, and on the centre of the piers on the upper or flood side of the bridge there are a number of stones with basreliefs on them. These bas-reliefs are disposed with a certain regularity in the esatre of each pier, but it is evident that they have come from an older structure, and been fitted into

				this. One of these is a carving probably intended for a representation of Buddha in a sitting posture. It has got the square broad face and long ears, and heavy head and feet one sees in figures of Buddha. The other point that tells against the antiquity of the bridge is the two kinds of stone used. The laterite of the abutments and of one or two of the smaller side arches, and the coarse granite of the centre arches would indicate that at least the masonry of the centre arches is of more recent construction than that at the side. In any case, however, the bridge must have been constructed before the Mughal conquest of Orissa, and possibly the explanation of the difference in the stone is that the centre arches of laterite having fallen in, the ruins of some Buddhist temple were used to rebuild it.						
7	Knttak	Jajpur	Temple of Barranath,	This is on the north bank of the Vaitarani. On the river face of it there is a stone revetment about 800 feet long, and 12 courses of masonry high near the entrance to the temple. There is a similar, but smaller, revetment exactly opposite, on the south bank at the temple of Jaganusth. There is nothing very remarkable about the temples themselves. In front of the door of the temple of Barranath are two figures of lions rampant, resting on their hanneles. They are fairly well executed, but they have been daubed over with lime.			iib	Yes	No	
8	Do	Do.	Mosque of Abu Nasir Khan.	This is an interesting bailding constructed in 1681. It is about 70 feet long by 80 broad. It has four minurets on the sast face, those in the centre small, the two at the outside large. From the ground to the summit of the two highest minurets may be about 50 or 60 feet. On the roof are three domes, the largest being in the centre, and measuring about 80 feet in circumference at the springing of the arch.	place of worship by the Muham madans.	is broken down, and the whole building is in a state of deeny. 24	Pari	Pari town, Jagannath,	Temple of Jagannath.	This temple was built by King Anang Bhim Deo, Lord of Elsphants, in the 12th year of his reign. Gold and jewels to the value of a million and a half measures of gold were set apart for the work, being estimated at half a million sterling in the money of our time. Fourteen years the artificers laboured, and the temple was finished in A.D. 1198.	-925454	See vi	iò	Yos	9****	946>**
				The great temple of Jagannath stands in the centre of Puri, within an enclosure measuring 620 feet by 600 feet, and surrounded by a stone wall 20 feet high. On each side of the enclosure is an entrance, the most celebrated of which is the gate on the east side, opening into the Bara Danda. It is flanked by colossal figures of lions, and thence called "Singh Dwar" or Lion Gate. In front of this gate in the centre of the road stands a beautiful fluted column of black basalt, about 40 feet high. It was brought to its present site some years ago from the black pagoda at Kanarak. A small figure of Hanuman is placed at the top. Within the sacred area are more than 50 temples, dedicated to the principal deities of the Hindu Pautheon. But the most conspicuous building is a lofty stone tower 200 feet high and 42 feet square, called the Bara Deul, or Great Temple. Within it, is a large platform made of marble, and called the Ratnasinghasan, or Throne of Jewels, on which the images of Jagganath and his brother and sister stand. Two large pyramidal buildings, called the Muksâlâ and Bhógmandap, with a smaller one between them, called the Jagamohan complete the temple. In the Bhógmandap is daily placed the sacred food intended for pilgrims; in the Jagamohan, "the delight of the world," the dancing-girls amuse the idol and his priests. 	Puri	Bhavaneswar, sub- division Khur- da.		The roof and sides of the temple are ornamented with various sculptures representing elephants, griffins, and other huge mensters. On the inside of the temple wall are many figures of the grossest kind; indeed all the temples of Orissa, great and small, are distinguished for the obscenity of their sculptures. The face of Jagannath is black; the eye-balls disproportionately, large, are represented by patches of white paint; the pupils are round and black; the nose is a pointed snout; the mouth a streak of red paint, curved upwards at the angles; there is no chin, and on the forehead is a tiara of diamonds. From each side of the head, at an angle, projects what is supposed to be an arm, but there is no hand. Bhuvaneswara (Lord of the Universe), an inland town on the right side of the Puri road, about 20 miles from Kattak, was once the capital of a large and flourishing kingdom, but now stands only as a monument of departed greatness. Its ancient palaces and lordly mansions are roofless and reduced to shapeless ruins, in great part concealed by rank and luxuriant vegetation. It is, nevertheless, a most interesting field for the antiquarian, abounding as if does in architectural remains of the highest value, and connected with historial associations of rare importance. It was the Buddhist capital of Orissa from the beginning of the 6th century B.C. to the middle of the 5th centur		In good order	16.	Yes	Drawing s and casts exist in Drs. Hun- ter and Rajendra L a I a Mitra's works, and in the mn- seum, but accurate drawings and sec- tions do not exist, and are very desir- able, as it is one of the most ancient and important specimen s of temple

				proud position in 940 A.D., when Nripati Kesari mada Katak his capital. Bhuvaneswar was originally intended to be a rival of Benares, and nothing was omitted in the way of details to make it an exact counterpart of its prototype. Every temple, every sacred pool, every rivalet, every ceremonial, every observance, and every legend of Benares was reproduced at Bhuvaneswara.			22.5		architec- ture.	
23	Puri	Bhuvaneswar	Vindu Sagara	In the centre of the town is a large sheet of water called Gosagara, or Vindu drops Sagara; so called from a statement in the Ekamra Purana, that drops from all the sacred pools on earth, in heaven, in the lower regions, as also of nectar wine, holy butter, and all that is most delectable, constantly fall into it. The tank now measures 1,400 by 1,100 feet, with an average depth of 16 feet. All its four sides were originally lined with blocks of laterite so arranged as to form magnificent flights of steps. On the south side these steps are still in a good state of preservation. On the cast and west, for half the length in continuation of the south side they are still in side, but beyond that they have fallen down into the bed of the tank. On the north side also, the whole of the stone has fallen down except about 20 feet in the middle, which forms a ghat on that side, leading from a group of small temples to the water. In the centre of the tank there is a large island protected by a stone revetment. This is a feature common to many of the larger tanks in Orissa, and adds greatly to the beauty of these artificial lakes. The Vindu Sagara island measures 60 by 50 feet, and has a small temple on the north-east corner of it. Before the temple there is a terrace with an artificial fountain in the centre. On the south-east corner, opposite to the terrace, there is a small pavilion supporting the reservoir of the fountain. Other pavilions, but of dissimilar make, stand at the south-west and north-west corners. On the occasion of		******	iib	Yes	No

					the bathing festival, an image of Vishau is brought to the temple, and by holding the thumb against the jet of the fountain, the water is directed towards the image and a shower-bath is effected, to the wonder of the faithful, who look upon the feat as a miracle. The tank is fed by one or more natural springs at the bottom, but the water is anything but pure.						
	l Puri		Bhuvaneswar, Khurda sub- division,	Courtyard in which stand the great tower and other temples.	The largest edifice in Bhuvaneswara is the great tower. It stands within a large courtyard surrounded by a high wall, and is about 300 yards distant from, and to the south of, the Vindu Sagara tank. The courtyard is bounded on the east by the road leading to Kapileswara; on the north by a broad highway called Baradand; on the south by a plot of land now overgrown with jungle, but formerly the site of a palace the remains of which are still traceable; and on the west by several small temples and their courtyards, mostly in rains. The area forming the courtyard of the great tower measures 520 by 465 feet, with a 28-feet projection on the north side. The projecting portion measures 235 feet in length, and the flanks 115 feet each. The wall surrounding this area is built of partially-dressed laterite blocks, and is 7 feet 5 inches thick. It is plain on both sides, but below the coping there is a simple moulding with two rows of lancet heads, one looking downwards and the other upwards. The coping is sloping, and projects about six inches, to throw the rain-water off the surface of the wall; but the top is flat, and terraced with a cover of concrete which forms a good broad road. Access to this courtyard is obtained by three doorways, of which that on the south is small and commonplace—a mere opening with a pair of folding doors. The northern one is larger, and surmounted by a propylon of small size. The eastern one is the largest. It is 31 feet broad, covered by a large propylon, guarded on each side by a		******	iib. 				large figure of a lion rampant. The style of the propylon is the same as that of the local porchos—a quadrangular structure with a pyramidal roof in nine tiers. The edges of roofs are set off with lancet headed crosts, and the top surmounted by a ribbed dome and vase-shaped finial. Altogether the structure is about 50 feet in height. The side walls are broken each by a set of three-fold projections relieved by pilasters and niches, having a series of longitudinal bands, and the plinth is formed of a succession of the latter. There are no carvings in any part of the structure. The lions are of the conventional type, with dog-like faces, and remarkable only for their size. On the top of the north-east corner of the wall there is a small pavilion built of stone, and accessible by a flight of stone steps from the inside. The structure was erected at the same time as the wall, and appears to have been intended for a Naubatkhana or music-room; but it is now used for religious purposes. It is called Bhetmandapa, and an image of Parvati is placed in it to offer welcome to Bhuvaneswara, the Lord of the Universe, on his return after the Car-festival. Along the inner side of the surrounding walls there is a raised berm 20 feet broad and four feet high. It originally served as a means of enabling the poople to defend the temple enclosure from outside attack, but latterly, it would seem, that idea has been given up, the inner edge of the terrace having been protected by a rovetment, and measures taken to build a range of rooms all round. This plan, however, has never been carried out except on the north east corner, where a long range of rooms have been erceted to serve as a kitchem. Some of the rooms are large, and divided into a nave and two nisles by two ranges of pillurs having breaket capitals formed of two blocks placed one over the other, and not cru-

				ciform as is so common in Buddhist buildings. In one of the aisles there is a very well executed figure of Nrisinha, in black chlorite. The area of the berm is left unpaved, but that of the courtyard below is paved with flags of granite. On the west side, from the middle to about halfway to the corner of the courtyard, there is a large temple of the usual style, and designed for a lingam. Though now entirely neglected, it is still in a fair state of preservation. Close by there are several small temples, and the courtyard generally is studded with a large number of temples, varying in height from 0 to 30 feet, and built in different styles, some with pointed, others with flat roofs, but of no importance either historically or as works of art. One of them, however, is worthy of note, as it is probably the oldest building in the courtyard—considerably older than even the Great Tower. It is a plain, modest-looking structure, about 20 feet high, measuring inside six feet square, and having the stump of a sandstone pillar to do duty for a lingam. The room is five feet six inches below the level of the courtyard, and it shows that the level of the ground round about the Great Tower must have been much lower, and must have been raised to its present height when the tower was erected. Under ordinary encumstances it would have been easy to demolish the little structure when the big one was set up, or to renew it on a higher level; but according to the Shastras a lingam once fixed to the ground should never be removed, for such removal would be tantamount to the destruction of all sancitity in the lingam, and an act of the grossest desecration. It is usual, therefore, in every part of India never to disturb a lingam; and as the one under notice was probably held to be of great sancity, it was allowed to remain in its place, though the ground outside its fane was raised, and the

23	Puri	Bhuvaneswar	Bhagavatistem-	arrangement of the place completely changed. The chamber of the temple is now accessible by a flight of three steps. On the western side, close by the corner temple, there is a magnificent temple dedicated to Durga. It was creeted during the reign of Granga Kesari, i.e., about two centuries after the creetion of the Great Tower. It marks the first step towards the spread of that sexual system of the Tantri Vamacharis, which originally did not form a part of the Sivite system at Bhuvanesward All the old temples were dedicated to Sivin the form of a plain lingam or more or less cylindrical mass of stone, without any carving or ornamentation or mystic symbol. Brin the latter forms the cylinder was fixed on a leop-shaped horizontal stone, rounded.		In good order	iib	Yes	No detail- ed mea- surements exist, but are very desirable.	ganirel
				at one end and more or less pointed at the other, and having two or three encircling lime on the top. This was called the youi. This however, did not satisfy the followers of the Vannachari system, and a distinct fermatigure to serve as the consort of the lingular was held essential, and the temple undenotice was erected to supply a local habitation for the wife of the presiding divinity of the tireat Tower. The temple of Bhagavati is a double structure, including a temple proper and a distinct porch, joined to the same time, and me claborately sculptured in the richest at most florid style of local art. The structure, is bas-reliefs, and floral bands on it as in every respect equal to the best of the kind to be seen in Bhuvaneswara. The marial being brick-red sandstone, and more warmer in tint than that of the stone used the ejection of the Great Tower, looks par calarly rich. The temple, however, is surrounded on every side by minor temp and dead walls that it cannot be seen advantage, and in its present position entirely lost. The presiding divinity of the control of the control of the presiding divinity of the control of the contr	ess.

				Entering the enclosure from the propylon on the east, the visitor first comes to a paved courtyard 65 feet long from east to west, and 50 feet broad from north to south. It is paved with stones, and is perfectly clear of incumbrances except the little mounds on the right hand side close by the gateway. Beyond, on the right and left, it is flanked by several other small temples of different dates and of no importance. One of them with a flatroof has a parapet of a peculiar construction, the like of which occurs only on the top of the Nat Mandir. It is formed of a series of crest-tiles not unlike Saracemin battlements, and somewhat similar to the Norman-Tudor flowers. The temple is dedicated to Gopalini, or the goddess Durga, in the form of a female cowherd—the same who destroyed the demons Kirti and Vasa. To the west of it there is a flight of six stone steps, each 48 feet 7 inches long and 3 feet 6 inches broad, the total height of the steps being four feet. This court shows the original level of the ground to have been the same as that of the little temple noticed above; it is just three feet below the level of the road outside. Above the steps, to the base of the foremost building of the Great Tower, the distance is 22 feet. In front of the gateway, but a little to the left of the central entrance of the foremost building, there is a monolithic column 2 feet in diameter and 20 feet high, surmounted by a ball couchant. The plinth of this column is square; it has no base moulding of any kind, and its capital is perfectly plain being formed alternately of two cavettos and two tiles. In style it bears no relation to the building around it, and is evidently of a comparatively modern date, erected long after the Great Tower and its enclosure.

26	Puri	Bhuvaneswar	Bhoga Man-dapa.	The tower includes a suite of four buildings standing in file. The foremost of these is called thoga mandapa, or the refectory; next, the nat mandir, or dancing hall; then the mohan, or the porch; and lastly the dewul, or the temple proper. Of these the last two were built at the same time, and in a style quite different from the first two, which were built long after, but at different times and on different plans. The foremost building was erected during the reign of Jagat, between the years 850 to 870 A.D. It was originally designed as an open pillared chantry, for the reading of the scriptures and the delivery of lectures and sermons by learned pandits. It stands on a ground-plot 60 feet square, of which two feet all round form a berm two feet broad and 3 feet high. The top of this berm is paved with stones, and the sides forming the plinth of the whole structure are elaborately sculptured in low relief. The surface is divided into panels by intervening pilasters, and filled up with images of men, women, animals, temples and bouquete; some of the representations being disgustingly obseene. Above the plinth there is a broad crnamental band set off with the figures of lines of pigeons geese, ducks, horses, elephants, cattle, and camels, very well carved in good relief but they have never been completely finished. In several places the outlines are punched but are not worked out. Some of the panel also are not completed. The area of the building above the plinth is 66 feet square. Originally it was colon naded all round, each side having fivopenings. The central opening on the ease was intended for the main entrance. Three mean looking steps lead to this entrance and it is flanked by two piers. The widt of the opening originally was eight feet eigh inches, and was spanned by an arch with		In good order	iiò	Yes	Yes; but more de- tails are needed.

Number						Class,	Remarks.	ings of the building grist.	
			This arch, like several other parts of the building, was never finished, as the left half of it is decorated with a scroll work, while the right half is perfectly plain. The piers are elbowshaped. On either side of the entrance there were two openings formed by a line of three pillars spanned by a stone architrave. Thus the side comprised two piers and ten pillars, each 13 feet 5 inches high. This arrangement was repeated on the other three sides, and in the middle of the room there were four compound pillars, each formed of four richly-carved columns, for the support of the roof. The roof is pyramidal; it rises in a slope from the cornice, and at a height of about six feet is edged by four tiers of cornice. Then follows another slope edged with three tiers of cornice. Then another slope, and over it a perpendicular neck with a cornice ornamented with lancet-headed projections surrounding a flat roof. From the centre of the last rises a short neck supporting the pinnade. In this form the structure had a light, airy, elegant appearance; and altogether the place was well suited for the purpose for which it was designed. But the architect had miscalenlated the strength of the architraves and the weight of the roof placed over them, and in a short time some of the architraves and the weight of the roof placed over them, and in a short time some of the architraves cracked and the pillars showed signs of being crushed. It became necessary therefore to close all the openings, except the central one, on each side with solid masoury walls, and to strengthen the central groups of columns by building them up so as to form solid square pillars. The width of the central openings bud also to be reduced by side piers, and the arches had to be supported on iron lintels. The new walls have bas reliefs and carved stones stock into them, but without any taste, order, or plan; and they serve only to disfigure what was criginally a handsome work of art. The original open pavilion was converted in this manner into a closed dark room

27	Puri	Bhuvaneswar	Nat mandir	longer fit for a lecture room, it was appropriated for a refectory. Offerings of cooked food are now placed in it thrice a day, instead of in the sanctuary, in which the space available is too limited for the display of any large number of trays of rice and curry. This arrangement also obviates the necessity of profuse and frequent washings of the sanctuary, which the contact of dressed rice would otherwise have rendered imperative. The objection not applying to offerings of flowers, fruits, and sweetmeats, these are carried to the sanctuary. Immediately to the west of the refectory, and abutting on it, is the nat mandir or dancing hall, whence the divinity in the tower is entertained with music, singing, and dancing. It is of a somewhat later date than the last, having been erected by the queen of Salini Kesari, who reigned from A.D. 1099 to 1104. Its ground-plot is a square of 52 feet. It has a bern two feet broad and three feet high on its north side, and a corresponding one on the south side, but none on the east or the west. The front of the berm is carved, like that of the berm of the Bhoga Mandapa, but the designs are different. Instead of panels filled with animal and human forms, it is covered with effigies of temples, each having a human figure scated in its middle, very like what is seen in Buddhist votive chaityas, and the broad band on the top is replaced by a series of plain mouldings. The walls from the berm to the cernice of the building are 20 feet high, and pierced by three doorways, except on the east side, where there is only one door leading to the Bhoga Mandapa. The central doorway is 14 feet high and the side ones 10 feet. The outcuring and shabbily put together. 28	Puri	Bhavaneswar	Mohan	delicately carved and strengthened, and decorated with brass bosses. The cornice of the building is flat and three feet deep. The roof is sloping and formed of four tiers (each edged with a series of lancet-headed acrotarias), and terminates at the top in a small square flat surrounded by Saracenic battlements. The roof is supported in the middle by four square pillars and several iron beams. In the interior face the room has no ornaments of any kind except a rich framing of chlorite round the central decrway on the west side. The design of this beautiful piece of work is the counterpart of that of the Kanarak gateway. On the left jumb of this door there are two inscriptions—one in Uriya and the other in Sanskrit; but neither of these affords any information regarding the age of the building. In the eastern wall there are two niches, one of which contains an image of the androgynous Haraparvati. The next building of the group is the Mohan or porch. It is of the same age and style as the tower itself, and was planned and built at the same time. According to the temple records of Puri, the foundation of this building was laid in the reign of Yayati Kesari, who wrested Orissa from the hands of the so-called Yayanas and re-established Hinduism on the ruins of Buddhism. The prince reigned from 474 to 526 A.D.; but the foundation having been laid at about the close of his reign, he did not live long enough to finish the temple. His successor, Surya Kesari, during his long reign seems to have done nothing for the temple, but Anants, who followed him, proceeded with the work, and it was completed in the reign of Lalitendra Kesari alias Alabu Kesari Prom corner to corner the perch measures 65 feet by 45 feet, but the sides are broken by three-fold projections. Nainbata	District.	Encality.	Name of object.	Any local history or tradition regarding it.	Custody or present uss.	Present state of preservation.	1000	THER RESTORATION DESIRABLE AND POSSIBLE. Remarks.	Whether pho- tographs, plans, or draw- ings of the building exist.	REMANES.
				preceding ones, it has been built to appear as if it rose from the ground without the intervention of any separate plinth or surrounding berm. The lowest part of the walls is shaped like a plain tile, a foot thick, and on it are ranged a series of pitchers in high relief, forming the stylobate. From each of these pitchers rises a highly ornamented pilaster so as to divide the surface into niches, which are filled with alto-relievo figures of men, women, and lions. The decorations are of the most sumptuous character, and the ornamente have been put in with lavish profusion. The doorway in the centre was originally closed by six mullion bars, each bearing the figure of a dansense. On the north side these mullions are still in situ, but on the south three of the bars were some time ago removed to form a doorway for the convenience of the priests, who found the passage through the nat mandir circuitous. Three of the bars are still in position. The spaces between the bars had been originally left open for the admission of light; but the light admitted by the doorway being more than enough, the openings were subsequently closed, and within the north side a thin partition was built; so as to convert the space between the bars and the partition wall (an area equal to the thickness of the wall of the building) into a small chamber. The cornice is flat, and projects four feet. The roof is pyramidal, like that of the Blogas Mandapa, and formed of receding ledges. It is divided into two tiers by a narrow perpendicular neck. The lower tier has nine ledges, and the upper one six. The edges of those ledges are elaborately carved and crowned at short intervals by lancetheaded finials. The subjects on the edges include processions of horses, elephants, eartile, and troops of infantry and cavalry. The central projection of

Number.							Class	Remarks.	building.	
				each tier has a pediment flanked by model temples, and crowned with the statue of a lion seated on its hind quarters. The roof above the upper tier is flat, and from the centre of it rises a cylindrical neck supporting the pinnacle. This is a repetition of what occurs on the Bhoga Mandapa, except in the sloping ribbed form under the Amlasila. On the Bhoga Mandapa this form is single, whereas on the Mohan it is doubled. Though the walls are thick enough to support any amount of weight that might be put on them, the corbelling of the roof is too rapid, or not sufficiently gradual to throw the whole weight of the roof on the walls. A great deal of its middle portion consequently needed additional support, and this has been provided by four massive square pillars, dividing the area of the room into a nave and two side aisles. The pillars are 30 feet high, perfectly plain, and the space between the front wall on the east and the two foremost pillars, has been partitioned by flying walls, leaving a passage from the door to the nave, and forming two side rooms.						
#				Close by the southern entrance on the left hand side there is a square charaber with a pyramidal roof. From the outlines of ornaments punched on this roof it would appear that the original design included an elaborate piece of workmanship, which has never been finished. The room contains several small brazen images, which are carried about on ceremonial occasions as substitutes for the preciding divinity of the Great Tower. In front of the last, and on the right hand side of the entrance to the porch, a pillared chantry was commenced, but after the communicative was abundoned. Its area is now covered over with a thatch. On the north side, right in front of the mullioned window, and close by it, there is one large and several small temples.

29	Puri	Bhuvaneswar	The Great Tow- er.	Abutting on the Mohan on the west side stands the Great Tower. Its ground-plan is of the same dimensions as that of the porch, except as regards the central projections, which on the north and the south sides are broader, and on the west narrower, than those of the porch. The plinth is modelled into a series of pitchers, and thereupon rises a series of pitchers, and thereupon rises a series of pitasters so arranged as to divide the aurface of the body into a number of niches of the same character as on the porch. Each projection has a central large niche, with small ones above and on each side. These niches give the appearance of a three-storied building to the facade. The recesses also have niches, but they are not so elaborate, nor are they flanked with side pitasters. The lowest niche on the central projection of each side is the largest and grandest. The niche is deep, and forms the resting-place for a large statue slightly taller than life-size. On the north side the statue is that of Bhagavati, the spouse of the presiding divinity of the tower; on the west, that of Kartika, his eldest son; and on the south, that of Ganesa, his second-born. For the protection of these figures from the weather an open pavilion has been built in front of each; but these structures are of a much later date, and not at all in keeping will the style of the tower. They are ugly in shape, totally devoid of ornament, and serve only to intercept the view of the majestic edifice in front of which they stand. The niches on the side projections, though not quite so elaborate as the central one, are by no means wanting in ornament. They are, however, not so deep as the central one, and the images carved on them are in bas-relief. The niches on the corner projections are smaller and less sumptuous than the last; they serve as recoptacles for the eight guardian divinities of the quarters, commonly called Dikpalas. These are Indra for the east; Agni for the south-east; Yama		In good order	ib	Removal of accretions desirable.	Yes; but further details drawn to scale necessary.

				for the south; Nririti for the south-west; Varuna for the west; Marut for the northwest; Kuvera for the north; and Isa for the north-east. In the Puranas two others are named—Brahma for the upper regions and Ananta for the lower; but these could not be provided for on the sides of the temple without offending the rules of the Shastra. The recesses between the projections have also their niches, but these are of a modest character and of simple form. The figures designed for these are rampant lions, and statues, 5 feet high, of men and women in different positions. Some of the figures are single, and intended to represent dancinggirls; others are in couples standing in various attitudes. Some of the last are so grossly obscene that it is impossible to describe them. The number of these, however, is not large. A few have been mutilated and others removed, leaving the niches empty. They also occur on the horizontal bands which separate the three tiers of niches. Domestic scenes in bas-relief are introduced below the pediments over the niches, and also on small panels on the piers. They are generally of small size, not more than a foot in height, and are now much disfigured The statues were prepared in the ateliers of the artists, and then put in their respective positions; but the bas-reliefs and panels were all carved in situ. The body of the tower is about 55 feet high, and, omitting the side projections, forms a square on the ground-plan. Over this rises the spire, but without the interposition of a cornice or other feature to mark the transition from the body to the spire. The horizontal monldings, which run over the topmost tier of niches are, however, so discontinued as to indicate where the former ends and the interpositional reduced in depth and breadth, are carried along the whole height, and are crossed by horizontal bands as on the upper

				part of the body, but they have no niches. The central band has at its base a large pediment of a coat-of-arms pattern, and its sides are flanked by a string of model temples in bas-relief which rise to the base of the crown. Just above the pediment there is a statue of a lion rampant projecting from the wall, and at the top a small window-like opening, which was probably intended to throw light into the interior and promote its ventilation. The top of the spire is flat, and from the centre of it rises a cylindrical neck supporting a ribbed dome, over which is placed the pinnacle or kalasa. As additional supports to the dome there are under it 12 statues of lious seated on their haunches. The pinnacle is shaped like a Grecian urn. Over the last there is a massive iron trident with one straight and two curved prongs, and not, as is ordinarily the case, having three straight prongs. It has now only two prongs, one of the side ones having been struck by lightning. To the trident is attached a large flagstaff; and the flag on it, a triangular piece of yellow calico, is renewed whenever a pious pilgrim can be induced to defray the cost of a new one. The height of the temple, from the paved courtyard to the top of the kalasa, is 160 feet; but as the floor of the temple was built the courtyard was lower than the floor, the total height originally must have been about 165 feet. It is not unlikely that formerly there was a chain or rope descending from the base of the kalasa to the ground, whereby people could ascend to the top when required, to renew the flag or for casual repairs; but there is no ornament or decoration on that side except in the walls which face the recesses between the two buildings, and there the						On this point further information is necessary as no correct section drawn to scale exists, nor are we informed how the height was necertained.

30	Puri	Bhuvaneswar	Minor temples	carvings are counterparts of what are seen on the other sides. The doorway between the two buildings is plain, having no framing nor moulding around it. The sanctum, like the body of the temple, is a square having a canopy on the top, and over it a roof dividing the interior of the tower into two stories. These, though of less importance than the great temple, are nevertheless of great interest, and very well worthy of preservation.	989 (77)		iib	Pabras	No	721800
31	Do,	Kanarak	The Black Pagoda of Kanarak,	The Black Pagoda, or the temple of the Sun, known as the Kanarak temple, was built by one Narsingh Deo in A.D. 1277. It is situated about 19 miles from the sea coast. The size of the temple inside is 60 feet square, with walls about eight feet in thickness, having four doorways, which are made of immense slabs of indurated chlorite, very minutely curved with figures and other devices. Over the doorway of the west side, there was one solid piece of this stone, which has now fallen down without having received any injury. On it are curved the nine figures of the Navagraha, each one foot six inches broad by two feet in height. These figures have four hands and arms from the elbow, and hold something in each hand. They sit cross-legged, tailor-fashion, and have on their heads steeple crowned hats. The mass of stone on which they are curved measures 19 by 44 by 31 feet, or 299.25 cubio feet, and weight about 24 tons. The whole of the exterior of the pagoda is very elaborately curved, some of the figures being life size. These are placed in niches between curved pilasters, most of them being human figures of the most obscene character. The temple is built or course sandstone. The stones have been fastaned together with iron dowels, and mortar has been little used. The stones lie very close together and are generally massive. The interior had a double roof, but the inner		Decaying fast	in		Yes; but very mea- gro.	7444447

				has fallen in. One of the most interesting features about it is the use of large solid iron beams; those which supported the inner roof are from 11 to 15 inches square, and not less than 60 feet long. They appear to have been constructed of wroughtiron, first in pieces of about three inches square in section. Several of them were then put together and welded, the marks of the hammer being distinctly visible. Some of the beams of a smaller section are still in the building, supporting the stones over the doorways. Arches have not been used, but over the doorways there are relieving openings, corbelled so as to relieve the beams from the weight of the masonry. The interior of the building is also corbelled to a point and not domed. The present temple, according to the tradition of the inhabitants, was intended as an entrance to the Great Temple that was partly constructed and allowed to go to ruin. The large piles of cut-stone, together with the number of colossal figures of griffins, elephants, and horses about, show that the construction of a very large temple was intended.						
32	Pari	Puri	Athara Nala bridge.	The Athara Nala bridge, on the Puri road, at the entrance to the town of Puri, is also of some antiquity. It is supposed to have been built by one Kabir Narsingh Deo in A. D. 1300. It consists of 11 openings—16 of eight-feet span, two of 10, and one of 14. It is built of laterite and sand stone, the openings being closed over by corbelling; its entire length is 320 feet.	1	In good order .	lib	Yes	No	724.74*

2	Ditto	Simraun on the Nipal frontier.		Simraun is partly situated in British territory, the frontier line passing through the walls. The river Jamuni flows to the west, while the Nipali villages of Kachorwa and Bhawan-pur bound it on the east and north. The ruins are in the form of a square, surrounded by an outer and an inner wall. The former, which is made of unburnt bricks, is 14 miles in circumference, the latter only 10. On the east side six or seven ditches can still be traced between the walls, while towards the west three or four are apparent. Inside there are the remains of large buildings. The tank, called Isra, measures 333 yards along one side and 210 along the other. Its sides are composed of the finest burnt bricks, each a cubit square and one maund in weight. The remains of palaces and temples disclose some finely-carved basements, with a superstructure of beautiful bricks. Some of the stones, which are 5 feet long, 14 broad, and 14 deep must have been brought from a distance of twenty-five miles. Twenty idels have been extricated; many, however, are much mutilated. The citadel or kotwali chautosa is situated on the north, and the palace or ranibas in the centre; but both only exist as tumuli, from 20 to 25 feet high, covered with trees and jungle. Tradition says that Simraun was founded by Nanyupa Deva, A.D. 1097. Six of his dynasty reigned with mach splendour, but the last of the line, Hari Sinha Deo, was driven out in 1322 or 1323 by the Muhammadans.		In roins	iia	Yes	No	1000 00
1	Champaran	Kesariya	Ruins of mound with stupa.	Two miles south of Kesariya thana on the road to Sattar ghât, there stands a lofty brick mound, capped by a solid brick tower of		In ruins	iin	Yes	No	537434

ux.				considerable size. It is a ruined mass of solid brickwork, 62 feet in height and I,400 feet in circumference at the base of the ruins; on the top there is a solid brick stupa, the whole surface of which is ruined excepting at the base, which is still perfect in many places. In the most perfect part there are 15 courses of surface brickwork still in good order, and in two other places there are 10 and 11 courses perfect. From these three points General Cunningham made out the base of the stupa to be 68 feet 5 inches in diameter. He also estimated the height at 38 feet 7½ inches for the cylindrical portion, and at 12 feet 10½ inches for the dome, or altogether 51½ feet. From the ruined state of the lower mound, compared with the perfect state of the base of the upper stupa, General Cunningham infers that the present stupa dates between A.D. 200 and 700, and that it was built upon the ruined mass of a much older and much larger stupa. The practice of creeting stupas on ancient foundations was not uncommon. This ancient monument is known to the people as Raja Ben ka Deora. The similar but smaller stupa at Kasiya is also called a Deora. In both cases the name belongs to the upper stupa, and not to the whole mass, as all mounds, whether of earth or brick, in this part of the country are named Bhisa. Of Raja Ben the people have no traditions, except that he was one of the five supreme emperors of Iudia. The piece of water immediately to the south of the stupa is also named after him, Raja Ben-ka Digha, or Raja Ben's Tank. Less than a mile north north east of this stupa there is a low mound with the walls of a small temple 10 feet squars. The head and shoulders of a colessal figure of Buddha, with the usual crisp, curly locks, are also visible. General Cunningham supposes this to have been the site of a monastery, as the remains of cells are still visible.			Class	Romarka

4	Champaran	Lauriya Araraj	Pillar	Araraj is a village situated about 20 miles to the north-west of Kesariya. About a mile to the south-west there is a lofty stone column, called Laur, which bears in well-cut and well-preserved letters several of the edicts of King Asoka. The edicts, which are most neatly engraved, are divided into two distinct portions, that to the north containing 18 lines and that to the south 23 lines. The pillar consists of a single block of polished sandstone, 36½ feet high, with a diameter at the base of 41.8 inches and 37.6 at the top. There is no capital, and the whole has been disfigured by the names which visitors have out upon it.	4	In good order	ia	Yes		Vide also Arches- ological report, Vol. I.

6	Champaran	Rampurwa	Asoka Lat	32 feet 9 inches high, with a top diameter of 26'2 inches, and a base diameter of 35'5. The capital, which is 6 feet 10 inches in height, is bell-shaped, with a circular abacus, supporting the statue of a lion facing the north. The abacus is ornamented by a representation of a row of Brahmini geese pecking at their food. The lion is injured in the mouth, and the column bears the mark of a camen-ball. The people near ascribe this injury to the Mussaimans; on the pillar is the following Muhammadan inscription:—Mahindin-Mahammad Aurangzeb Badshah Alumgir Ghazi, San 1071. The column is much thinner and lighter than the one at Araraj. The edicts of Asoka have been beautifully inscribed, and there are also some unimportant inscriptions in modern Nagri. The pillar is now worshipped as a phallus, and is commonly known as Bhim Sinh's lathi, or club. The Rampurwa pillar is similar to that of Lauriya Navandgarh in dimensions, that is to say, in diameter of the shaft at top, 261 mehes. It is impossible to measure the diameter of the base, as it is buried in the ground much below the water level However, by the apparent form of the column, it is believed that the base would also correspond in diameter with that of the mounnent at Lauriya, and it is believed that in height also the Rampurwa pillar would not vary much, if at all, from the pillar with which it is compared. Both the shaft and capital of the Rämpurwa monument are composed of very highly polished sandstone. The present position of the pillar is nearly horizontal, and when General Cumungham first visited the site, the upper portion of the capital alone was visible. It is believed there had been some digging done around the pillar a few years back, but of this excavation there only remained a slight truce: the obliteration might possibly have been caused by the earth silting up in course of time, which is the more likely, as the water level was barely five feet zix inches below the surface.	*****	Lying neglected	īd	Yes	Yes, but not complete. 	Gayå	Gayá city	Ruins	This old town is picturesquely situated on a rocky ridge running along the bank of the Phaigu. There are now no ancient buildings existing, but most of the present temples have been erected on former sites and with old materials. It has been a place of considerable importance for many centuries, but during this time there have been at least two changes of religion, and very few of the older structures are now intact, for, as the buildings of the desorted faith were at hand and readly available, they were used in the construction of buildings belonging to the prevalent religion. On rare occasions only was a new temple built of fresh materials. With the exception of the temple of Vishmu Pad, all the other temples are either converted Buddhist or built with the materials obtained from Buddhist buildings.						
9	Do	Pitto	Temple of Vishnu Pad.		Wale.	Fair	iδ	Yes	No	Remains of antiquity which are of interest are to be found in most of the temples kept up by the Gayawals. 				Nore.—Some of the sculptures are of great interest, but Mr. Beglar strongly deprecates the expenditure of a single rupes from public funds on the repair and conservation of these temples. The Gayawals are amply rich enough to be able to easily afford to keep these temples not only in repair, but also clean, a thing never done. Pressure can, and might, if deemed advisable, be brought to bear on them to compel them to observe in their temples the most needed sanitary rules, instead of being allowed to spread disease and death all over India; and this can only be done by insisting on professional engineering advice being taken and carried out as to drainage, sanitation, the perflation of wind, and the needful cubic feet of air space for the maximum numbers of pilgrims who gather at any period. Mr. Beglar most carnestly desires to bring this matter prominently to the notice of Government. [The above remark also applies to objects Nos. 10 to 20,]						and valuable inscriptions are let into the walls and floors of the temples, as also some sculpture, some few of the latter probably dating to 250 B.O. It is only necessary that wilful and wanton injury be not inflicted on the inscriptions and sculptures. Note.—The above remark also applies to objects Nos. 10 to 20.

	7 Gayá	Buddin Gaya	The Great Temple of Buildin Gaya.	his long and arduous life. They were all places of great smetity, and for 1,500 years were held in the estimation of his followers as the holiest places of pilgrimage on earth. With the expulsion of Buddhism from India, three of them have fallen into oblivion, and one has been appropriated to Hindu worship. Buddha Gayá is now a large thriving village on the west bank of the river Liláján, about six miles from Gaya. There are several small mounds and a large one on the east side of the village. They mark the sites of ancient buildings which have long since crumbled to dust. The largest mound covers an area of 1,500 by 1,400 feet, and is divided into two unequal parts by a village road. The southern portion is about one-third the size of the northern one, but it is most important, as in its centre stands the most ancient monument in the village, the great temple, which will be noticed below. The most important object of antiquity is the great temple there, which is also remarkable as being the linest brick structure still standing in India. The bricks are of large size, the largest being 18" × 18" × 4" nearly. These however are only found in the very lowest courses the rest vary from 18 × 12 × 25 to 12 × 8 × 21. The cement used was clay both for the walls and the arches. Cement of surki and line, however, was not unknown at the time, for it has been used on roofs, copings, and other exposed places and also for plasticing the walls and for the formation of mouldings and ornamenta figures. The temple was built in the first century A D., on the site of a still older on built by the Emperor Asoka 250 year before that date. It was surrounded by a stone railing set up by that monarch, an within this enchasure, it would seem, in	Muliant	In good order	ia	Already re-	Yes.

				other building originally existed. A part of this railing was found in situ by Captain Mead in 1864, when he carried on, by order of Government, certain excavations round the temple. Thirty-two pillars of this railing were also traced in the verandah of the private residence of the mahant or abbot who owns the place. The only part of the building which remains at all entire is the great shrine. It is a slender quadrangular pyramid of great height. The spire is on three sides surrounded by a terrace about 25 or 30 feet high, the extreme dimensions of which are 78 feet by 98 feet. One end of this terrace, towards the east, formerly covered the parch, which has now fallen and brought down part of the terrace with it. A stair from each side of the porch led up to the terrace, on which there was a fine walk round the temple, leading to the second story of the shrine in front, and to a large area behind, on which is planted the celebrated pipal tree. The interior of the shrine consists of a chamber. At the far end is a throne of stone, on which is placed a mis-shapen daub of clay representing the Deity. Above this chamber are two others, one on the level of the old terrace, and the other still higher; but the falling of the perch has cut off all communication with these chambers. The doceway of this temple is placed on the east side, and measures 64 feet in breadth, forming, with the depth of the wall, a vestibale 64 feet by 134 feet. The door frame is formed of stone burs of a reddish grey colour, and over it there is a cross bar of grey-colored stone, forming a strong hypertherion. Then follows a blocking course of considerable thickness. The space over it was left open,						The description refers to the tem ple before repair, the triangular slit referred to having been caused by the falling in of the triangular piece above the doorway below.

				the sides first rising upright, but at a greater distance from each other than the width of the doorway, and then approaching each other so as to form a triangular slit of large dimensions. The opening was produced by the gradual corbelling of the walls from the two sides, which gave to the sides the appearance of reversed flights of steps, each step being three bricks deep. The two sides met at the top in a point. This shows the outline of the true Indian herizontal arch to perfection. It is said that this space was laft open for the purpose of allowing the light at dawn to fall on the presiding divinity of the temple.						The temple, ne- cropolis, ghat, monasteries and stupas have been repaired and only need keep- ingap.
15	Gnyá	Puddha Gaya	Monnstery or math.	Next to the great temple, the largest building in the locality is a monastery or math. It is situated on the left bank of the Lilajan, in the midst of a garden extending over an area of about 20 acres, and surrounded by a high masoury wall. It is four-storied in some parts, but three-storied all round a small quadrangle. The ground floor round the quadrangle is faced by a one-storied verandah built on sculptured monolithic pillars on three aides and on wooden pillars on the fourth side. To the north of this there are three two-storied buildings of moderate size and long ranges of out-offices and stables on the east front. On the south there is a commodious three-storied building called Baradwari, with a terrace in front of it. There are also four temples, one of which contains only a marble stab, originally designed for a chiffonier, but now bearing an inscription partly in Sanskrit and partly in Burnese; a second contains some Buddhis statues. Outside this monastery, towards the west, on a part of the large mound aforesaid there is a two-storied building of good make and size. It belongs to the monastery, meaning it are four Hindu temples, one of which is dedicated to Jagannatha, on		The roofs are low and the windows very smal and few in number, but the building is very substantial and in excellent repair. 				which was built by Gángá Bai, who died at the beginning of this century, is dedicated to Ráma, and the rest to Sivá. Towards the south-west corner of the outer wall of the monastery there is a cemetery, also attached to the monastery. The dead bodies of the monks, unlike those of other Hindus, are buried, and the cemetery contains the graves of about two hundred persons. The body is buried in a sitting posture, and in the case of mere neophytes a small circular mound of solid brickwork, from three to four feet high, is all that is deemed necessary for a covering for the grave. For men of greater consequence a temple is held essential, and in it immediately over the corpse, a lingam is invariably consecrated. For Mahants the temple is large and elaborately crnamented. It would seem that even for neophytes a lingam was held essential, but in the majority of cases its place was supplied by a miniature votive stapa picked up from the Buddhist ruins in the neighbourhood. Half-buried on the top of the mound, it passes very well for a lingam. On the way from Gayá to Buddha Gayá there are several monastaries of Hindu Sannyasis; everywhere the graves are alike.						
19	Gayá	Buddha Gaya	The itoma seat of Buddha.	The Vajrásana, or the adament seat on which? Buddha was seated during his protracted meditation under the Buddha tree, is a circular slab of blue-coloured stone, five feet in diameter, carved on the upper face in an elaborate and ingenious design. It is now lying in the perch of an unfinished and unroofed temple dedicated to Vágiswari Devi, and would seem to be the identical stone described by Fa Hian, a Chinese pilgrim who visited the holy places at Buddha Guyá before A.D. 309 and 414.	*****	- 4340)*	iib.	Y+15	Yes	"The stone was supposed to be the Vajrasan, and is so referred to in works hitherto published. Recent research proves it not to be the Vajrasan.
20	De	Ditto	Temple of Tara Devi.	To the east of the Great Temple, and close to it, there is a smaller one dedicated to Tara Devi. In style it is a miniature representation		In good order	iib.	Alreadyrepaired	Yes	Already required

				of the Great Temple. It has been built with bricks of the same size and make as are found in the Great Temple, and cemented with clay. The portion now visible measures 36 feet 5 inches in height on a base of 15‡ feet by 15‡ feet. The chamber inside is 5 feet 8 inches by 5 feet 10 inches by 11 feet 2 inches, having a vaulted roof in the form of a pointed Gothie arch. It was probably plastered in the same way as the Great Temple. It was provided with a porch.						
21	Gaya	Buddha Gaya	Mounds	There are some mounds now existing outside the new boundary wall of the temple, and, if dug into, traces might be brought to light of the sites of some, of the numerous stone temples and stone houses in the neighbourhood. Monolithic columns of 6 to 8 feet in height and of rich designs are largely met with, and bases for these, of equally elaborate designs, are also abandant. Fragments of mouldings, friezes, architraves, and other architectural stones are to be met with stuck in the mud walls of almost every but over an area of five miles around the sacred spot. These prove the former existence of a considerable number of stone temples or other baildings in the neighbourhood of the Great Temple.		******	116	991414	No	They have been dug into as far as the Mahant would permit; but further exploration is desirable, as only recently the entire lower part of a monastery was exhumed by Mr. Beglar at the instance of General Cunningham and with the Mahant's consent.
				The stones used for these works of art are granite, grey sandstone, basalt, and the dayl blue potstone for which Gayá is so famous. The works in granite are the oldest, and they are at the same time the roughest. The other stones came into use successively in the order named, and neatness and artistic excellence followed the same order. For boldness and freedom of execution, however, the carvings on the sandstone pillars of Asoka de not yield to the most finished work on the softest potstone. On the centrary, the latter is thoroughly conventional, whereas the former display a considerable amount of natural grace and freedom of action.

22	Gaya	Barabar hills in Jahanabad sub- division.	Temple and caves.	The highest peak of these hills is crowned by a temple of great antiquity, sacred to Sidheswara, which contains a linga, said to have been placed there by Bara Rajah, the Asur King of Dinajpur, whose bloody wars with Krishna still live in the traditions of the people.	*****	In good order	iiò	Yes	No.	
				To the south, and near the foot of this hill, the path up which is freely adorned by images of all kinds, lies a small valley enclosed on two sides by the mountain, on the third by an artificial barrier of stone, and on the fourth by a long low ridge of granite. Here in the solid rock have been out the remarkable caves, which have given the name of Satghar to the gleu. Four out of these seven extraordinary caves average 32 feet by 14, and three out of the four, named the Karna Chopár cave, the Sudámá cave, and the Lomás Rishi cave, are chiselled to a wonderful polish. The fourth, the Viswa Mitra cave, is still antinished. Inscriptions in the Pali character fix with certainty the date of the excavation of these caves. The oldest was dug in 252 B.C. and the latest in 214 B.C., so that they have been in existence for more than 2,000 years. Not far off is the sacred spring called the Patalgangá, and in another spur of the hill, known as Nagarjani, are the three other caves which complete the Sátghar or 'seven caves.' The largest, Gopi cave, contains a small sunken tablet containing a short inscription in the ancient Pali character of Asoka's edicts. The other two caves are called Vapiya or well cave, and Vadathi cave. These three caves were excavated by Dasa-		Dino	£a	Yes	Yes,

3)	Gayá	Ner	A pillared temple.	Ner is on the Patna and Guya road, west from Dharawat, and about twenty miles from Guya. There is a pillared temple close to the road very much in the same style as the temple at Punawa. It consists of three rows of monolithic pillars, ten in each row. Fronting the temple there is a further row of four pillars. The temple or shrine behind consists of brick and mad cement, but very little of it is now standing; the superstructure is entirely gone, and none of the temples of this form are sufficiently complete to allow of a conjecture as to their original form. The roof of the portice and of the shrine is composed of large granite slabe; a linga occupies the shrine, and there is a mutilated figure of Ganesa lying outside. Judging by the size of the mound and the part of the shrine remaining, the temple must have been a lofty one. The bricks are large and well made, although inferior in this respect to those used in the construction of the Buddha Guya temple. It is probable that the temple dates to about 700 A.D.	known.	In rains	lia	Yes	No	the convey- ance and safe custody of the sculpture are strongly recom- mended, but it is absolutely essential that the excavations be made under competent gui- dance if they are not to be barbarously des- tructive as those for road metal and bricks have been. The sanctum still exists though the tower fell in long ago, and most of the pillars and portion of roof are standing. The temple is used as a cattle-pen and for storing and dry- ing cow-cakes by the poor of the village. It is proposed to clear it out and to provent the plas- tering of its pil- lars, floor, and walls with cow- cakes and its use as a cattle-pen in future. Cost Rs. 30.

37	Gayá	Shamshernagar	Remains	subject to robbery on the road along the banks of the Son going to Patna. Daud Khan died about 200 years ago. About eight miles lower down the Son from Daudnagar, there is a considerable village, called Shamshernagar, founded by and named after Shamsher Khan, a nephew of Daud Khan. A pleasing structure was built here by him as his tomb.	posses- sion of the des- cendants of Shum-		iib	Yes ,	No, but desirable.	
38	Do	Koneh	Ditto	On the road between Daudnagar and Gaya, about 16 miles from the latter, is the village of Konch. It consists of two parts, the bazar on the road side, and the village proper about 100 yards to the north. Between the two villages there are extensive mounds of brick rubbish, and a great many figures and statues are scattered about. The principal one is life-sized and beautifully carved, but the head is wanting. It probably represents Surya. Higher up on the mound there are two purely Buddhist figures with the creed in inscriptions round the head, and two others, probably Surya, of a later type. Passing through the village proper one comes to the large temple mentioned by Buchanan, a drawing of which is given in the ist volume of "Martin's India." This building somewhat resembles in style that of the great temple at Buddha Gaya, and the construction is much the same; the materials are the same, beautifully moulded bricks set in mud cement. The lower chamber is 10 feet square, and has an arched roof, as in the Buddha Gaya temple. In the upper chamber the walls are gradually contracted, so that the four sides meet at the top. The opening into the upper chamber is also on the lehra principle. In the construction of this building the Hindus showed that they understood both kinds of arch, and used them as suited their requirements. The west side of the temple has been much damaged by the heavy rains, and large masses keep falling year by year. Unless	knowu.	Partly dilapidated	iis	******	Yes	The place has been visited by both General Cunningham and Mr. Beglar, and photographa were taken by the latter and Mr. Peppe, but these photographs are not sufficient to illustrate the architecture in detail; they give merely a general view. As the building is undoubtedly of ancient date, detail sections and photographs are needed; and as it isn t too far gone for preservation, it is proposed that it be conserved. There is little to excavate. Cost of conservation Rs. 3,000. Photographs and drawings Rs. 100.

41	Gayá	Umgu	Hemains	Umga is situated within a few miles of the dåk bungalow of Madanpar, on the Grand Trunk Road, and 14 miles west of Shaharghati. There is a temple here on a rocky spur of one of the highest hills overlocking the Grand Trunk Road, built entirely of square granite blocks without cement. The height of the temple from the rock to the crest is about 60 feet, the extreme length from east to west is 68 feet, and the breatth 53 feet. To the north and south there are balconies which give the temple a distinctive character, and mark a transition from the open pillared portice which had previously been the rule, as at Punawa, Ner, and Pali. The large porch in front was entirely enclosed, and was lighted by these side balconies. The interior has a very imposing appearance, and the monolithic pillars with bracket capitals mark a decided advance from the plain columns with cross brackets. Inside there is a large slab of black chlorite with a long inscription recording the building of the temple by Bhairab Indra in Samyat 1496, i.e. A D. 1439, on Thursday, the light halt of the moon Vaisakh, and was dedicated to Jagannath, Balbhadra, and Subhadra. The shirme is, however, occupied by a linga. To the south of the temple there is a fine large tank with a flight of stone steps on the cast side nearest the fort, part of which is still standing north and south of the tank. Several mounds indicate the position of the town. Higher up the same hill on which the tomple is built, and on the sammit of a higher ridge, there is a curious little altar with a huge boulder alongside it. Under the boulder sacrifices of kids and other animals are still made. Every available ledge and spur on this hill seems to have been occupied by similar structures, and there are also a great number of figures and lingas both on this and the adjoining hills. Still higher up, and also facing the east, are the rums of another temple, nearly as large as the one lower down, and in the same style,	the Ma- haraja of Dec.		iò	Yes	Yes, but rot enough.	Little is needed in the temples beyond detailed drawings of the architectural features, and plans and photographs in detail of the ornamention; these would be very interesting, as few temples are now standing intact in the Patna Circle, and none that Mr. Beglar can call to mind of the transition period to which these belong. Cost of drawings and photographs. Nore—The above remark applies also to objects. Nos. 42 and 43.

		Kurkihar	Ditto	10 inches at the top and 2 feet 2 inches at the bottom. The passage leads into the cave at an oblique angle, and is 3 feet 5 inches long. The chamber itself is 15 feet 8 inches along the floor, 15 feet along the roof, 6 feet 4½ inches high in the centre, and 11 feet 1½ inches in width. The roof is vaulted, and springs from the floor. The whole of the ioside is highly polished, and the rock is as compact as those in which the caves at Barabar are executed. Curiously enough there is no trace of an inscription inside or out. Inside, from the high polish every where, no inscription could escape notice. Outside, without a recess being cut for its reception, no inscription could be cut, and there is no sign of any such recess. Its construction at any time must have been an achievement of no ordinary kind, and it is remarkable that an inscription should have been omitted. The date of this cave must be about the same as the date of the caves at Barabar, which it so closely resembles. Kurkihar is situated about three miles northeast of Punawa. There are large and extensive ruins at this place, and a great number of statues scattered over a large area. The principal one is a figure of Sakya Sinha sitting under the tree at Buddha Gaya, with representations of events of his life on either side and a small inscription on the pedestal. From the neighbourhood of Gáya two parallel ranges of hills stratch towards the next hand.	Un- known.	Do	iii	No	Yos	considered not to date later than the second century (B.C.) Wanton destruction or defacement should be prevented. The boulder is close to Wairganj on the traya-Nawadah road. Exploration needed,
				ranges of hills stretch towards the north-east for about 36 miles to the bank of the Pan chana river. Just opposite the village of Giriyek. The eastern end of the southern range is much depressed, but the northern range maintains its height, and eads abraptly in two lofty peaks overhanging the funchiana river. The lower peak on the east is crowned with a solid tower of brickwork, well known as Jarasandhu-ka-buithak, or "Jarasandhu-s throne," while the higher peak on the west to which the name of Giriyek peculiarly belongs, bears an oblong terrace covered with the rame of several buildings.

Number.					tese,	preservation,	Class,	Remarks.	building exist.	
				The stupa called Jarasandhu-ka-baithak is a solid cylindrical brick tower, 28 feet in diameter and 21 feet in height, resting on a square basement 14 feet high. The cylinder was once surmounted by a solid dome or hemisphere of brick, of which only 6 feet now remain, and this dome must have been crowned with the usual umbroila rising out of a square base. The total height of the building could not therefore have been less than 55 feet or thereabouts. The surface has once been thickly plastered, and the style of ornamentation is similar to that of the great temple of Buddha Gayá. General Cunningham fixes the date of its creation at about A.D. 500. On the west side of Jarasandhu's Tower, and almost touching its basement, is a small chamber, seven feet square, filled with rubbish. It was found that at five and half feet in depth the rubbish gave place to brickwork, below which was a stratum of stone, evidently the rough foundation of the building. Externally this building was square, with projections in the centre of each face, and similar in its ornamentations to the basement of Jarasandhu's Tower.						
48	Gay4	Giriyek	A mound of rains.	On the eastern side of the Panchana river there is an extensive mound of ruins, being half a mile long from north to south and 300 yards broad in its widest part. In the middle of the mound there is a small mud fort, and at the northern end there are several pieces of sculpture collected together from different places; one of these is inscribed and dated in the year 42 of some unknown era, somewhere about the 11th century, or perhaps even somewhat later.			o assed as in, and the soulpture, &c., as iin. 				diameter. The shaft has 16 plain sides; at 38½ inches above the pedestal it contracts its diameter suddenly by about three inches. This immense column is lying horizontally on the ground pointing north and south: about half of it is below the surface of the field. This seems to have been the site of a large religious community, and the remains are extensive. There are two temples partly standing. They seem to have had a pillared portion in front, which has since been built up with brick. The door of the shrine in the southern temple is very fine. Outside there is the same curious group of a prince on horseback with the same attendants, &c., as at Konch, only differently arranged.						by Asoka, and by the Guptas from B.C. 250 to A.D. 300. The monolith ought to be dug out and set up to prevent its conversion into road rollers and sugar mills, the usual fate of such monoliths when not looked after. The place was once rich in ruins and sculptures, but the finer pieces have gone to Binar. Buchanan's work may be consulted, as also Broadley's papers in the journal of the Asiatic Society for 1872. Photographs were taken hereby Mr. Peppe.
50	Gayá	Bhagwanganj, near Bihta, on the Punpun river.	Mounds	See Amhæological Report, Vol. VIII	Un- known. 86	Musaffarpur	Near Saraya, 18 miles south west of Muzaffurpur.	Bhim Sinh's lathi or club.	This is a monolith supporting a lion carved in stone. It consists of a plain cylinder about 24 feet high, on the top of which is a pedestal with the lion. The cylinder is in one piece, the height of the whole being about 30 feet. Its depth below ground is unknown, but it must be very great, as some persons once dug down several feet and failed to reach the foundation. The stone is covered with names, many of them English. Of these some date from 1793. Dr. Rajendra Lala Mitra says that this was creeted by Asoka in the third century before Christ, and that it has counterparts at Ghazipur and Allahabad. It stands in the court-yard of a Brahman's house, but no religious meetings are held there.	******	Fair order	ia	Yes	Yes	to ruin. Conservation Rs. 250. Vide also General Cunningh a m's Archwolog i on I Survey of India report of tours in 1880-81, Vol. XVI.
87	Ditto	Ditto	Stupa	Immediately to the north and outside the court-yard there is a rained brick stups with an old pipal tree growing on the top. This place is famous in Buddhist annals as the spot where the second Buddhist synod was held, 443 B.C.	PRESE		İa	Yes	No.	
88	Ditto	Hajipur	Jami Masjid	About a quarter of a mile up the Gandak, and close to the Sonpur Ghât, is a stone mosque, which is about 30 yards long and 11 broad, and faces north. The front is of a plain description. The top consists of three hemispherical domes, the centre one, which is the largest, springs from the inner sides of the other two. Their architecture is very psculiar. They consist of horizontally placed rows of stones, each row being a circle, and each successive circle being smaller than the one immediately below, until the key-stone is reached, which is also circular. The mosque is said to have been built by Haji Hyas, when he founded the town which bears his name, nearly 500 years ago.	*****	******	iis	Yes	No	The only building of any consequence is a stone musque, the Jami Masjid, which is ascribed to a certain Maksûs, in the time of Akbar. The mesque is built almost entirely of Hindu materials, and apparently stands on an old Hindu site on the road leading down to Pathara Ghât on the Gandak opposite Sonpar The stones still

93	Muzaffarpur	Jauri Dih	Sculpture, temple.	The legend of the Jauri Dih is that there was a fort and town of the Chero Raj at this spot long anterior to the Muhammadan conquest, and that the country around belonged to the Dusâd people before even the Rajputs appeared; that it was still held by them under their own caste kings, after the Brahmans had lived amongst and taught them; that finally, an enemy appeared from the west, and the Chero Raja, or at any rate the chief of the fort, sallied forth to battle, leaving word that if they saw his standard remain erect, they would know he was victorious, but that if they saw it fall they would know him to be beaten and were then to set fire to the castle to escape falling into the hands of the enemy. The standard-bearer, however, let fall his flag when the battle was over, and the garrison of the fort and women, thinking the chief dead and the battle lost, shut themselves into the castle, which was three-storied, and set fire to it. On the chief's return he found his castle a pile of flames and his family perished, so in despair he threw himself into the flames and died. The above is the most authentic account procurable, though there are some few variations given as to the chief throwing himself into the well after his family and treasurs had been thrown in; but as there are several evidences of the place having been fired, and none of a well, the former seems the most probable. Everything found points to a purely Hindu origin, and not a single small brick, so typical of the Muhammadan, is to be found. The remains of the votive figures of men and horses and charaghs and toys are also of Hindu origin. One would think it must have been a temple previously, and the debris on the hillsides and at the village site should be examined for remains; this would not be difficult, as the country being low no great depth of excavation would be necessary. It is stated that after the destruction of the tower the place relapsed into a thick jungle for a long time, but that after			iib		No.

	l'a'na	Baragaon in Bi- har sub-division.	Nalanda monasteries.	in which it stands. The people attribute its building to the satjug, and say that it is the oldest temple in this part of the country; but unfortunately it is completely white-washed so that it is difficult to ascertain its age. There are several carved stones inside, and outside there is a large lingam, about 3 feet high and 2 feet in diameter, which looks like a piece of monolith pillar. An annual mela is held here on the Sivarātri, or last day of the waning moon of Phâlgun. Some people call the Deokali mound Draupadgarh, and affirm that it was the fort of Raja Drupada. We may accept the name while we repudiate its connection with the father of Draupadi of the Mahābhārata. Baragaon has been identified with that Vihāragram, on the outskirts of which more than a thousand years ago, flourished the Nalanda monastery, the most magnificent and the most celebrated seat of Buddhist learning in the world. When the caves and temples of Rajgir were abandoned, the monastery at Nalanda arose in all its splendour on the banks of the lake of Baragaon. Six successive kings vied in its embellishment, halls of disputation and schools of in-truction were built between them; shrines temples, and topes were constructed on the side of every tank and encircled the bose of every tower; and around the whole mass of religious edifices were grouped the four-storied dw-llings of the preachers and teachers of Buddhism. The mounstery, or more strictly and correctly speaking, the University of Nalanda, waz, as it were, a circle from which Buddhist philosophy and teaching diffused itself over Southern Asia. It was bere that Aryadern of Ceylon attached himself to the person of the great teachers		*****		Pegara	A very few indifferent photo-graphs exist, but no reliable plans or sketches, and no sections or vertical details whatever. 				No. VIII.—Some distance south-east of the seventh tope are the remains of an eighth tope, now nearly reduced to the level of the surrounding plain. The east of the ruins is faced by a tank called the "Pansokhar." The modern village of Baragaon lies to the north of the ruins and is in a line between the "Pansokhar" and the "Sarajjokkhar" tanks. The great central tumulus (No. IV) was excavated in October 1872, with the following result:— The eastern, western and southern façades were entirely uncovered, and the ruins laid bare. Raised a few feet above the plain was found an evenly paved court, nearly 100 feet square. This court was surrounded on all sides except the east by halls and buildings of every description, and these doubtless served as the dwelling places, refectory, &a., of the recluses of the convent. In the centre of the court rose an enformous temple, 80 feet square, at base. The main fabric was composed of large bricks, each about one foot three inches in length, three inches thick and ten inches wide, placed so close together that the cement which joined them was barely visible. The first two terraces of the building were uncovered, and appeared to be in a good state of preservation. The great entrance was towards the east (a custom still observed in the construction of the Buddhist temples of Thibet), and was faved by a terrace of stope 50 feet in length and composed of two rows of sandstone shabs, the first decorated by a simple triangle in the centre, and the second caved with a very beautiful geometrical pattern. These stores vary in length from seven to three feet, and are nearly a foot square. In the centre of this terrace, which is about six feet in front of the main building, is a flight of three steps					prints are now in the Indian Museum, Calcutta; but better one-with more room and absence of o betructing causes are needed. The ornamental details must soon fall to powder through expesure, and it is impossible to restore them. To keep a per manent record of them before they go bail that can be done. Rs. Cost of excavations and repairs 1,000 Photographs and drawings 250 Total cost including all establishment, except the Executive Engineer and his office 1,256 Nore—The aboverements apply also to object No. 6: Most important and to be carefully preserved.

				ten feet in length. The first court was of very considerable proportions—50 feet by 26 and was covered by a stone roof supported by a series of 12 large pillars. These columns rested on a rough pedestal of unhewn stone, which has disappeared beneath the floor. The shaft itself is seven feet eight inches high, of which one foot nine inches are taken up in the capital. The upper half of this consists of a simple square, and the latter of an oval band of a rich lace-like pattern. The rest of the pillar, down to one foot ten inches of the lower end, where it again has a base of oblong shape, is oval, having a circumference of three feet eight inches, and ornamented at regular distances by two bands of carving about twelve inches wide. Each band consists of two parts, the first exhibiting a row of flowers strongly resembling heraldic roses, and the second a series of conventional Lions' heads. On each side of this covered terrace, but several feet behind it, is an elaborate brick moulding fourteen feet long and six and a-half feet high, surmounted by a narrow terrace of the same material, approached on either side by three steps from the pillared court. This moulding has 16 turns, and is of the most graceful appearance. On each side of the entrance court, and above the narrow terrace, the main wall is still standing ten feet high. On the west side of the court was the great entrance door, which has fallen down. This doorway was of extraordinary beauty, and measured 20 feet across and more than twelve feet high. It was composed of a series of 18 slabs, nine on each side, gradually lessening in height towards the centre, where they terminated in a narrow portal hardly three feet wide, and aurmounted by a heavy slab decorated with elaborate carving. The whole of this enormous mass of sculpture rested on three great stones, 2½ feet square and 22 feet in length. Each slab was

				clamps, and the upper portion of each was joined to the lower in the same manner. The first two stones on either side were devoid of all ornament, and were placed nearly a foot behind the other slabs. The next pillar of the series (or rather what remained of it intact) was eight feet in height, twelve inches broad, and of enormous thickness. The first stone was of light brown colour and of a soft and friable nature, whereas this one resembled the hardest granite, and presented a curious variety of appearance and colour. The base of it was plain, and above it is a grotesque kneeling figure with a long beard and uplitted bands, supporting a canopy, above which rises a long line of geometrical pattern. Slab No. 3 is of black basalt, and is scarcely four inches wide. It is taken up entirely by the representation of two enormous snakes, one twining round the other. The next stone (No. 4) is of the same material, and is of unusually elaborate workmanship. A winding stem of flowery pattern work covers its face, and from each side of it springs a lotus-like flower, which alternately forms the resting place of a mystic bird or an elephant rampant. The fifth slab is plain. The sixth pillar is ornamented at the base with a female figure eight inches high, from whose hands apring a winding branch of foliage and flowers, which stretches to the top of the lintel. On the base of this slab, on the south side, there is an inscription, of which an annotated translation and reading in modern Devanagri by Dr. Rajendra Lala Mitra is given below: Deva Nagri transcript. **The fifth slab is a state of the lintel of the l

				In the reign of Srimat Mahipala Deva, Samvat 913 (A. D. 856). This is a religious gift of Baladitya, the son of Gurudatta and grandson of Haradatta, a follower of the noble Maháyána school, &c., a devout worshipper, who came from the city of Kausambi (wherein he was the chief among the wise men of the auspicious Tailadhaka). Whatever merit may accrue from this, may the same be to the advancement of the highest knowledge among the mass of mankind. The end. The seventh slab is a repetition of the third, and the eighth is of the same stone as the second, containing three large female figures, one above the other, each about 11 feet high, and in the hands of each is seen a musical instrument similar in shape and size to the modern sitar. The ninth stone has a simple beading, and is surmounted by a heavy slab covered with carving. The two last slabs of the series, together with the one which covers them, formed the doorway which leads to the inner part of the temple. This magnificent gate, now in the Bihar museum, led to the second hall 12 feet wide and 18 feet long, and on each side of this chamber were smaller cotagon rooms, from the western end of which a starcase led to the terraces above, and which were approached by narrow doors right and left of the great gateway. These rooms were evidently of great height, and were decorated by elaborately carved panels of sand-stone let into the brickwork. One of these consists of a slab of Mirzapur stone covered with the most elaborate design, the chief feature being two figures with arms and legs entwined. The colour of the stone is peculiarly beautiful. Another is of blackbasalt, and represents a large elephant, richly caparisoned, with a lotus flower in its mouth. Beyond this

				another door opens into an inner chamber 23 feet square, the walls of which are, in their ruined state, 14 feet high. This was doubtless the most sacred portion of the building, and there is at its western end a headless Budaha four feet high, placed on a handsome throne of black basalt, divided into five compartments. The first on each side contains single figures; the next, lions couchant; and in the centre are two devotees in the act of making an offering. The wall is 18 feet thick on either side.						
				The higher terraces and roofs have fallen over on the northern side; and from an examination of their ruins, it is conjectured that the building consisted of at least five stories, surmounted by a spire or minaret, not by a cupola. The total height was probably at least 200 feet.						
				The excavation on the western side is the most perfect of all. The upper terrace is about 63 feet long, and is 12 feet above the lower one, which is 11 feet wide. The wall of the higher terrace is quite plain, decorated by a simple monking about three feet above the base. The terraces consist of solid brickwork, a fact which has been ascertained by making a perferation six feet deep in the centre. Not quite in the centre of the building is an irregular protuberance 22 feet						
				wide and 27 feet long. Possibly it was a mere support, built up to sustain the weight of the upper stories when they showed symptoms of decay; for, on removing the greater portion of it, the pilasters, mouldings, and statues which decorate the wall of the lower terrore were found entire behind it. The ornamentation of each of these sides consisted of a series of mouldings and niches filled with stucco figures of Buddha in various positions. After the removal of the protuberance, the west side presented at the base a moulding of brick-work five feet three inches high, having 13 distinct turns. The moulding

Number,					present usr.	preservation.	Class.	Remarks.	ings of the building exist.	
				runs along the whole facade. After the first 6 feet, it recedes a foot and continues in the same line for 18 feet, when it again advances a foot and continues in that line for 8 feet. This arrangement is continuous. Above the moulding is a series of niches, two feet ten inches wide and three feet three inches high. They are separated by pilasters about four feet six inches high. These pilasters have plain square bases and a three sided shaft, each shaft being somewhat semicircular in form. Above this is a square moulded capital. Above the niches are lotus-shiped bosses of brick, protrading from the wall, and above these is another moulding similar to that below. The niches are surmounted by arches of overlapping brick, and each contained a figure in plaster. The original bricks are moulded with exquisite exactness and present a great variety of patterns; some of the pilaster bases, for instance, containing figures, &c., fitted together in different portions. The temple has evidently been covered at least twice by a coating of plaster moulded into different forms, but as a rule greatly inferior to the workmanship of the brick underneath. The southern side is precisely similar to the western. On the top of the terrace, which doubtless ran round the three sides of the temple, was probably a verandab, as holes which may be the sockets of the beams are visible in the upper wall. The southern side still stands more than 30 feet high.

2.			550 feet long. There are large round bastions at the owners and in the middle of each face. The brick walls are still from 10 to 12 feet in height, but they must have been much higher originally, as the earthen rampart is generally about 20 feet in height, with a base of from 50 to 60 feet. The whole height of the rampart with its parapet could not therefore have been less than 30 or even 35 feet. In some places, on the west and north, there are traces of a ditch. Altogether the Sifa-kund fort must have been a place of some strength in Hindu times, when gans were unknown and thick lofty walls could only be attacked by escalade. On the east, the west, and the south sides, there was a single entrance, and on the north there were apparently two gates, but the rampart on this face is so nearly obliterated that a guess could only be made at the position of the gates by the depressions on the edge of the mound. The boly tank is a deep circular pond, with stone and brick star-cases on three sides, leading down to the water's edge for the convenience of bathing. A great mela is held here annually on the Bam Navami of Chait, or 9th day of the waxing moon, when several thousands of people assemble to do honour to Rama and Sita. Near the north flight of steps there is a broken stone bull and a lingum with the remains of a floor of an old temple of Siva. To the south-east of the tank there is a brick temple of Mahadeva as Girija Nath, or the husband of the mountain-born goddess Girija or Parvati. On the southern rampart, close to the middle bastion, there are two small places of worship under trees—one dedicated to Garh-debi, and the other to Baran Bir. The former is the intellary goddess of the fort, but the latter is the shrine of a deified ghost, or spirit of a

128	Saran	Sitakund	Bediban Temple	of the western rampart, immediately opposite the principal temple, and under the shade of a magnificent tree, there is a small terrace called Jogi ka-baithak, or the "Hermits' scat." In the northern part of the fort there are a few ruinous samadhs, or tembs, of former Jogis. But the principal temple, which stands close to the west side of the tank, is a white-washed building, 27 feet square, with cetagonal turrets at the four corners and a domed roof. It looks exactly like a Muhammadan temb, and there is a very strong suspicion that it really was a temb which was appropriated by the Hindus during the troubled times of the break-up of the Delhi Empire. Inside, under a separate canopy, which appears to be a late construction, there are seven black stone statues and one smaller figure of a different kind. Bedihan is another fort enclosing a Hindu shrine. It is situated about half a mile to the south west of the fown of Madhuban, and one mile to the south of Sita-kund, It is more than twice the size of Sita-kund, being 925 feet long from north to south and 670 feet broad, with an average height of 13 feet above the fields outside. The remparts appear to be of earth only. They are thickly covered with large trees, and are entirely surrounded by a broad shallow ditch. Two hundred feet from the northern end of the enclosure there is a lofty terrace, 20 feet in height, surrounded by a brick wall, with two long flights of steps on the northern end of the enclosure there is a lofty terrace, 20 feet in height, surrounded by a brick wall, with two long flights of steps on the northern end of the enclosure there is a lofty terrace, 104 feet square, with a versualah or portice on the entrance side, which faces the east. The only object of worship in this temple is a stone with a Muhammadan inscription, which is called Bhagwan-ka-charan pad or the "foot-prints of Bhagwan-ka-charan pad or the "foot-prints of Bhagwan-ka-charan pad or the "foot-prints of Bhagwan-ka-charan pad or the "foot-prints of Bhagwan-ka-charan pad or the		Neglected		No	No.	Vale also Archmo- legical report, Vol. XVI. 				square and one foot thick, with seven lines of Arabic writing in the usual raised letters. Unfortunately the daily libations of ghi and water have injured the letters so much that the record is not very legible. Apparently it is dated in A. H. 847. The words such saba arbain, or "the year seven and forty," are quite plain, but the hundred word is not so clear; it looks like saman mayat, or 800. The name of Mahmud occurs in it, and if this be the name of the reigning king, the record must belong to Mahmud Sharki of Jaunpur, who reigned from A. H. 844 to 863. In this case we have not only the appropriation by the Hindus of a Muhammadan tomb as a place of worship, but the still more strange adoption of an Arabic inscription as an object of worship under the name of "Bhagwan's foot-prints."						
129	Sarah	Sårangarh	Fort	Sårangarh, or Sarvangarh, is an old fort situated on the north bank of the Bûr Gandak, five miles to the north-east of Motihâri. It is also called Nonachâur-garh, or the "fort of Nonachâur," a Dusâd, who is said to have reigned. The mound is high and covered with old bricks and jungle. Some portions of the brick-walls also remain. Nonachâur, the Dusâd, is the here of the Subahi-garh legend, and if he is the same person as the owner of Sårangarh, the lover of the Princess Subahi, must have been at least a petty chief, although of low caste, General Cunningham did not visit Sårangarh, as he was informed that there were no remains except same ruinous brick walls. It is worthy of notice that all the oldest places in this country are situated on the banks of the Bûr Gandak or old Gandak Biver.		Neglected	list	Yes	No	Vide Archeological report, Vol.
Pac	Ditto	Sagardih	Stupa	Sagar-dih, or the mound of Sagar village, is also called simply Bhisa, or "the mound," and is attributed to Raja Sagara, the Solar-hero. It is therefore also known as Sagargarh, or "Sagaras castle." It is 13 miles to the south of Motihari, and 10 miles to the	******	Ditto	iia	Yes, and further exploration necessary. 				north-east of Kesuriya. It stands on an elevated piece of ground 500 feet long by 300 feet broad, on the eastern bank of an ablong sheet of water called Gaya-Pokhar. Nine hundred feet to the south-east, there is a fine large tank, 1,000 feet square, which is called simply Pokhar or "the tank," and sometimes Bauddha Pokhar, which soems to point to the Buddhistic stupa close by. On the eastern embankment of the Banddha Pokhar, there is a small shrine in the shape of a round brick platform 3 feet high, with a single knot on the top. This is the usual form of the Grâm Deota, or deffied ghost, which is so extensively worshipped by all the lower classes. It is chiefly attended on Sundays and Mondays, when a young goat or sheep is sacrificed and flowers are offered. At the south-west foot of the mound there is a small brick temb of Ghulâm Husen Shah, who is more commonly known by the name of Mallang, or "the madman." It is a small brick building, only 13½ feet square, but it has 15 bigahs of land attached to it. The present occupant is the fourth in descent from Mallang, so that the shrine may be about 100 years old. The mound is 37 feet high, with a circular base nearly 200 feet in diameter. Due east, a few hundred feet, there are two bridges on the high road, one of them with six piers and two abutments, which, from their dimensions, must contain about 4,500 cubic feet of solid brick-work, all of which was taken from the old stapa on the mound by one Bishanath Bābu 25 years age, when he was making the road. General Cunningham dag a tranch all round the building outside as well as a shaft down the centre, by which he ascertained that the stapa stood on a paved terrace raised 20 feet above the foundations of the stupa. The shaft was 12 feet in diameter at the top and about 9 feet below. At a depth of 12 feet the size of the bricks suddenly changed from 15 by 8½ by 2½

				inches to 17½ × 9½ × 3½ inches. This was the level of the plinth on which the building was erected. At first he thought that the large bricks might have been made specially for the plinth of the stupa and the pavement of the terrace. But it afterwards struck him that they might have been the remains of a former stupa which had become ruinous, and this, he thinks, must actually have been the case, as he found, amongst the large bricks at the bottom of the shaft inside the roots of a decayed palm-tree standing quite upright. From this he concludes that, when the present stopa was begun, the ruina of the previous building must have been overgrown with jungle, which was all cleared away and the top levelled, leaving the roots of this single palm embedded in the bricks of the older stupa. There were 13 courses of large bricks forming the plinth of the existing building, which was 4 feet deep. If this plinth was the remains of a previous stupa, as he supposes, then the old building must have been larger by twice the breadth of the plinth, or twice 5 feet 2 inches. In plan the present stupa is a circle of 22 feet diameter at base, which decreases to 10½ feet at the top of the ruin. In section, the lower part for 4½ feet consists of a few bold mouldings, above which the wall is quite plain at a height of 3 feet 2 inches. Then comes a band of moulding,8 inches deep, supportedon 6-inch dentils or brackets. The wall is then divided into 14 faces by plain pilasters, 8 inches broad, without bases. They must have had capitals, however, as General Cunningham found a single piece of brick carved with a volute at one end similar to the volutes which he has seen in other brick capitals. The whole of the upper part of the stupa above the middle of the pilasters has been removed; but annoagst the bricks lying about, he found a single specimen with a semicircular end and sloping sides, which must have formed part of some circular ornament of the pinnacle. He found also that the bricks of the hemi-

Number,							Class	Remarks.	building exist.	
				sphere had been made of two kinds, one with the long face carved, so that they must have been built as headers and stretchers. That they formed part of the hemisphere was proved by their being slightly bevelled on the euter or curved edge. One stretcher was 14 inches long outside by 12½ inches inside, and 8½ inches broad. Two large cowries in good preservation were found inside the shaft, but nothing was discovered from which the age of the building might be inferred. From the general appearance, however, as well as from the relative proportions of height and diameter, Ganeral Cunningham concludes that it must be a mediaval building, probably of the with or 10th century. That it cannot be older is, he thinks, proved by the discovery of the roots of a palm tree embedded in the brickwork of a previous stupa. What may have been the age of this older stupa can only be gaessed. It must, however, have been several centuries older than the present stupe, as we must allow a long time for it to have become so ruinous that only its foundation was left to be overgrown with palm trees. The great paved platform, 20 feet high and 175 feet in diameter, on which the stupa was erected, must of course be as old as the original stupa. It was faced with a wall of brick all round, as General Cunningham found this outer wall at four different places selected at random wherever the jungle was less dense. As the bricks of this wall were all of the smaller size found in the later stupa, be concludes that the wall itself is most probably of the same age. Apparently the wall sloped inwards, as he found in one place that only the three lower courses were perpendicular, above which four courses were perpendicular, above which four course were perpendicular, above which four course were stepped inwards, about 3 inches in each course, followed by another course 6 inches still further back. Above this the face of

Number:		1	4				Class.	Remarks.	bullding exist.	
				the wall was broken; but as continuous courses of bricks could be traced upwards on the face of the mound, he thinks it probable that the wall gradually receded until it reached the paved court on a level with the base of the stupa. There is no tradition connected with the Sagar Dib, except the common story which is told at so many other places, and which probably belongs to the old Buddhist times when traveilers received hospitality in the monasteries. Formerly, the people say that travellers used to find cooking-pots lying ready for their use; but an avarious Baniya having carried off some on his pony, the cooking vessels have never been seen since.						
131	Saran	Unchidih	Stupa	General Cunningham reports as follows:— "Of the places called Unchadih or Unchidih, there are two, one situated at a distance of \$\frac{1}{2}\$ miles east by south from the village of Singasuni, and the other eight miles due north of the first Dih, close to a village called Jakiari. "I however heard, from the people of whom I made enquiries, about a garh situated balf a mile west of Singasuni, and on visiting the spot found it to be a mound covered in parts with broken brick. These remains measured about 130 feet long by 100 feet broad, and have a general eminence of a few feet from the surrounding country; but the four corners are considerably higher, the highest of these (the south-west corner) being about 8 feet above the field level, and there is a winding road about 14 feet broad, traces of which can be followed for upwards of a quarter of a mile. This road leads up to the northern face, which I make out to have been the entrance to the fort. "As the greater part of the day was spent in enquiries about Unchidih, and I wished to march next day on my road to Bettiah, we had not much time. However, I excavated one of the corners thoroughly, and at about three feet below the surface came upon solid	6		That	Yes	No	Vide also Archino- logical Report, Yol XVI.

				brickwork which only lasted for five courses, and was of an irregular rounded form; this gave place to cartii, showing that these corners must have been commenced with earth, and after being carried up for about four feet with this material, brickwork was resorted to in carrying on the building of these curious mounds at the four corners of this garh. They may have been busions to the fort, or more likely, are the foundations of four towers which once embelished the general design of this edifice. Itselfes laying bare one of the corners, I made some desultory excavations through the sides of the mound, in the hope of finding some traces of ramparts or walls; but although three trenches were out through the north-east side, which was in the most regular and straight line with the exception of a stray piece of brick here and there, which may have fallen in by accident from the other parts of the ruins during its demolition, I did not find anything which would lead to even a supposition of walls having existed; at least they could not have been commenced at so low a level; but as the lowermost course of brockwork in the corner towers begins much above the ground level, the foundation of these walls might have rested on an eminence of earth. In the well, five feet in diameter, which I sunk, as near the centre of the mound as I could, I was more successful; for at a depth of four feet below the surface we found portions of four large bricks and nine pieces of bune, one large; also a few beads similar to these found at Besarh in the excavations made in the great rained fort there. I failed to connect the fregments of bone into any form, but from their appearance should think they were human; possibly the beads may have been interred tegether with the bones; but these being only mere fragments, it would be difficult, if not impossible, to arrive at any conclusion regarding this discovery. The next remarkable part of the remains is the curiously winding road above men

				tioned, which leads up to the north face of the mound. I traced this road for nearly half a mile; it takes a south westerly direction, and, were it not covered with some scattered hats at a distance of little more than a quarter of a mile from the gark, in all probability the track may have extended a great deal further. It is occasionally used by bullock cart-drivers travelling from one village to another with their wares; these carts pass right through the ruined mound; and in consequence of this practice, it is much cut up with their ruts, but the road itself, though very ruinous on the sides by age, does not seem to suffer much from this troffic. "The natives are more than usually ignorant concerning these remains, and further than their forming a ruined fort (garh), they seem to know acthing; nor is the zemindar of the village more enlightened on the subject."						
132	Saran	Kusturia	Mound	On the west side of Sareya, near the little Bakeya Nala, and 16 miles nearly due east from Motihari, there is a large mound of brick rains called Kestaria, 160 feet long by 100 feet in breadth, and 4 or 5 feet in height, which is said to be the remains of an ancient town. To the west of the mound there is a gigantic l'akar tree (Ficus glomerata), about 15 feet in diameter, under which is a seated female figure, which the people know as Durgavati kani, but which appears to be the goddess Durga, as she holds the usual bow and arrow. The stone is much injured below, but the figure of a lion, on which the goddess is scated, is faintly traceable. There is also a broken figure of Vishmu, and a carved stone, 2 feet 11 inches long. Inches broad, and 6 inches thick, which looks like a piece of a door-jamb, or architrave, as there is a figure on it with bands of flowers. The mound is said to be the remains of a Chero Baja's place. It has been dug up in all directions for bricks, which measure 13 by 10 by 24 inches. The fields for half		vector.	ili	No	No	Vide also Archaeo- logical reports, Vol. XVI

				a mile round are strewn with broken bricks. Durgavati Rani is said to have been the wife of one of the Chero Rajas. One day when she was scated under the Paker tree, a Banjara came up to ber, and tried to take off her bracelets and other ornaments. She prayed for assistance, and was at once turned into stone, with all her ornaments.						
133	Shahabad	Sarsaram.*	Tomb of Sher Shah.	This tomb, which is still almost entire, stands in a large court-yard, enclosed by a high wall of cut stone, in the eastern face of which is a large gate, a mesque facing the west. The tomb consists of a large octagonal hall surrounded by an arcade of three Gothic arches, from which springs a second storey, also octagonal, and 25 feet high. It is situated within an artificial tank. The roof of each of the octagonal sides of the verandah surrounding the dome proper consists of three alcoves, each supported by four Gothic arches, above which is a level ferrace forming the first storey about 35 if feet high: 6 feet of this height is occupied by a very heavy balastrade and parapet. The terrace is 15 feet wide, and has a small empola supported by six rade columns at each corner. The second stage consists of a plain wall with a cornice, surmounted by a low parapet. On the top is a small terrace 9 feet 10 inches wide, having at each corner a cupola similar to those below. Above the second stage the outside of the building rises perpendicularly, with a third stage of 16 sides, 11 feet high. There is a kind of false balustrade, from which a nearly homispherical dome arises. On its summit, again, is a small suppla supported by four pillars. The interior of the building forms an octagon, the sides of which are 54 feet at the base. Each inner side of the gallery is divided into three others by an equal number of arches. In the central arch of each of the seven sides there is a door. The most westerly side is inscribed with sacred sentences, and in the centre with	Govern- ment.	Repaired	in	Already repaired.	Yes; and details in course of collection.	The greater portion of work here has been already done, and drawings and photographs now are all that is needed, with the exception of repairs to the approach. To improve this a bridge should be constructed across the tank.

138	Shahalad	Fort Robbas	Rains	hill, and is about 18 feet wide by 12 feet high. The sides and bottom of the interior are very uneven, with steep ascents and descents, while masses of rocks project irregularly from the sides. The first room extends almost due cast from the mouth for about 120 yards, with steep ascents at the end. The farther extremity is called patalganga, or the river of the pit; but there is no river to be seen. About half way a branch leads off to the south-east, which, after running 90 feet or so, rejoins the main gallery. A narrow passage again leads from this into the west end of a second gallery similar to the first and about 370 feet long. This latter, about 140 feet from its west end, is crossed at right angles by a similar gallery, the south arm of which is the largest, being 80 yards long. It contains the chief object of worship. Fort Rohtas, or Rohtasgarh, is so called from the young prince Rohitaswa, som of Haris Chundra, of the Solar race whose image was worshipped on the spot till destroyed by Aurengzeb. In 1539 Shere Shah captured Rohtasgarh from the Hindus by treachery and began to strengthen the fortifications. Man Sing, on being appointed Viceroy of Bengal and Bihar, selected Rohtas as his stronghold, and is said to have erected all the buildings now existing about the year 1054. The remains of the fortress now occupy the whole of the table land about ten miles in length from east to west and four from north to south, with a circumference of nearly 28 miles. Much of the area is bare rock, but there is a large quantity of red soil. There are 84 paths up the rock accessible to men. Of the buildings which these fortifications were intended to defend but little remains which can be attributed to the Hindus. On the south-east corner of the plateau is an old	Govern- ment;	Repaired	iia	All the principal buildings have been conserved already.	Yes, photographs have been taken and plans, but sections and details have not yet been taken though it is intended to secure complete illustrations of its architect ure soon.	Nothing is needed to be done here; it is only necessary to keep the jungle down, not only in the palace, but, and even mer especially, in the west outer or K at han tiy a gate, which is the finest specimen of military architecture in Bengal.

139	Shahabad	Baxar	Fort ,	temple of Rohitaswa, called Chauri, where his image was worshipped until destroyed by Aurengzeb. It is situated on a steep peak, commanding a magnificent view of the country beyond the Son. A stair leads to the summit, the steps of which being entire cannot be much older than the time of Man Sing. Behind it is a small mosque ascribed to Aurengzeb. At the foot of the stair is a small but handsome temple, attributed to Man Sing. Within the gate at Raj ghat it is believed there must have been a very large building, which formed the private residence of the commander. In it are two temples; one of them is exceedingly handsome, the other is small and dedicated to some Tirthankara of the Jains. There are also under-ground chambers, one of which, a large octagon, has been explored, the others yet need exploration. It is believed that they communicate by means of flasures with a secret path leading down to the foot of the hill. The palace, or mahalserai, extends from north to south, and has its principal front to the west. It is irregularly built, without any architectural pretensions. The most degant part in the whole is the door—a large gothic arch with the figure of an elephant on each side. Inside is another arch of equal dimensions, leading to the King's Palace, one of the best proportioned parts of the whole building. Its roof is plastered in the alcove form, with many small compartments, similar to the stone roof in English cathedrals. The building where business was transacted is perhaps the meet tastefully designed of all. It is called bara dwari, or 12 gates, and gives its name to the square in front. In front is an open hall supported by four double columns. The half within the colonnade was occupied by clerks.	Govern- ment.	In ruins	ia	Les	No ., 1	Cept in good order. 				a face of massive brickwork, ending at both sides with circular towers. In the centre is a large doorway, and at each side of this doorway, arranged at equal distances, are five smaller ones: in all eleven doorways, all being of the pointed arch form. Above the doorways, the face of the wall is a little deeper than it is in the intervals, and the wall is dotted with circles by way of ornament. The doorways lead to a large hall, 144 by 96 feet. The pillars, of which there are 10 rows of six each, divide the space into 11 aisles lengthwise and 7 sisles crosswise. The 11 doorways are opposite the aisles. The central aisle, that which is entered by the large doorway mentioned above, is however closed at the western end by a wall of stons. This was the place of prayer, the people, of course, worshipping facing the west. On the north side of the central aisle are the remains of two small platforms of brick; one near the stone prayer niche, which was for the worshippers, and one near the doorway, the place where it is said Khanja Ali sat to transact his business; for this large hall was both a place of business and a place of worship; and even the altar served worldly purposes, for two holes are shown in it where Khanja Ali kept his boxes of money.		of the masonry is in good order, and with mere surface repair would make a fine public building. The roof, however, is covered with a forest of jungle, which completely hides its form.				exploration needed.
				The roof is composed of 77 cupolas or domes (11 rows of seven), supported by arches on the pillars beneath. It is all very massive, but the pillars are nevertheless very thin, not more than 11 or 11 feet square. The pillars were apparently originally built of grey stone. Each pillar shows two or three of these grey stones placed one above the other, and cut quite smooth; and about eight feet from the ground, where the arch springs which supports the cupola above, there is a sort of capital.

õ	Jeszore	Masjidkar	A mosque	The buildings described, though the most complete, are by no means the only remains of Khanja Ali to be found in this place. For two or three miles round about the country is full of ruins of old mosques, some of them similar in structure to the mosque of the tomb, some simpler. The people who reside near them say that there are in all 360 mosques and 360 tanks, and that they were called by the names of Khanja Ali's leading men—Bakhtiyar Khan, Ikhtiyar Khan, Alam Khan, Seadut Khan, Ahmad Khan, Daria Khan, and so forth. When, in the extension of cultivation into the Sundarhan ferest, some people were clearing the jangal along the banks of the Kabadak river, at a point about six miles south of Chaudkhali, they came upon an ancient mosque, close by the river-bank, and they called the village by the name of Marjidkar' the digging out a mosque. The building thus found proclaims at the first glance that it owes its origin to the same hand which built the Sath Gumbaz'. The principle of structure is the same, only instead of a breatth of eleven domes and a depth of seven, we have here a breadth and depth of three domes only, or nine in all. There are the same massive walls, for they are about six fest thic; a large central doorway is beneath the middle dome on each side, and two smaller doorways on each face, one on each side of the outral one. But the building itself appears to the eye so massive a structure that the doorways seem dwarfed out of all preportion to the size of the face. As in the 'Sath Gumbaz,' so here also, there are four towers at the four corners of the build-		The building is clean in the inside, and is all in very good order. The tops of the corner towers have fallen away, but the rest of the masonry looks as if it would stand for ages. The roof, too, is kept clean, no jungle being allowed to grow, except a little grass, and thus we see not only the forms of the nine domes, but the tracery work along the upper edge of the four faces.	Aii	Yee	No	Detail drawings and photographs very desirable.

				same little circlets traced on the face of the brick which are used to ornament the larger structure near Bagher Hat. Inside we find, of course, only four pillars supporting the roof, one at each of the four interior depending cusps of the arches which support the nine domes. The west, or rather the north-west, side has no doorways like the other three sides; but looking from the inside we find, at the places where the doorways should be, three mehrabs, or niches, the places towards which prayer was made. As in most of these ancient buildings, the middle part of each face stands higher than the sides. The pillars are made of stone, though they do not rise with that regularity with which the pillars of the 'Sath Gumbaz' are arranged. Most of the stones are of the same kind of grey stone as were used in the 'Sath Gumbaz,' but there are one or two of a redder colour, and one or two speckled stones among them.							
6	Jessore	Amadi	Tomb	Less than a mile down the stream (Kabadak), and on the same side of it, is the village of Amadi, where there are other relics of Khanja Ali. Close on the river-bank are two tombs placed lengthways, north and south; they are said to be the tombs of Bura Khan and Fatah Khan, father and son, followers of Khanja Ali. The tombs are no doubt ancient, but at first sight they would not seem to be more than 400 years old.		The northern tomb is now falling into the river.		No "	. The following objects relate to the ruins at Muhammadpar, where Raja Sitaram Ray, zemindar of Bhusna, established his capital in A.D. 1700. The place was so named after Muhammad Khan, an old fakir, who had established himself there, and who was persuaded to leave the place on condition of its being named after him. There is a large quadrangle, which encloses most of his (the Raja's) buildings, within which he kept his soldiers, and within which was his own house. It measures more than half a mile in each direction, and is surrounded on each side by an excavated ditch, the earth of which thrown inwards is used to raise the level of the quadrangle, and specially of the edges of it, leaving as it were a ramp round it. The ditch on the eastern and northern sides has gradually filled in, principally through the influence of the river, but that on the western side is still full of water. On the southern side, the ditch is of much more ample dimensions than on any other side. It forms a fine sheet of water, a mile long, looking almost like a river. By the earth obtained from these arcavations, and by that obtained from these arcavations, and by that obtained from these arcavations, and by that obtained from these arcavations, and by that obtained from these arcavations, and by that obtained from these arcavations, and by that obtained from these arcavations of labour. The chief entrance to within the quadrangle is at the south-east corner. From here is seen towards the north the high and broad ramp upon which stood the bazar, and at the south-east of water above referred to. Number.							Glass.	Hemarks.	building exist.	181
19	Jessoro	Muhammodipur	Treasure-room	The 'Lion Gate' leads to a little court-yard, with three buildings, one on each side, not much larger than ordinary native hats, but built of bricks. That facing the gate is the malkhana, or treasure-room of Sitaram, and that on the left side is the guard-house. These two buildings were used for these purposes by the Rajas of Nattor, when after Sitaram's time they obtained the zemindari. When, however, their zemindari of Naldi was sold up (about 1500) the purchasers forcibly expelled the Nattor people from these houses, and they, obliged to erect a treasure-room for themselves, built the little one on the right-hand side.		All three rooms are now in ruins.	iii	No	No	
50	Ditto	Ditto	Siva Maudir	Just south of the treasure-house there is a small gateway coming down from Sitaram's time, which leads to a small court-yard at the back of the treasure house. The building facing the gateway on the west is a common Siva Mandir (place of worship of Siva) erected by the Nattor Rajas. It is much in the shape of a native but with its bent roof and verandah in front, opening outward by three arches.		The plaster over the brick-work is sculptured, but much of it has fallen off.		No	No	******
21	Ditto	Ditto	Temple of Kall	On the north, on the bank of the treasure-tank, there is the Temple of Kali, the smallest and the oldest of Sitaram's three temples. In shape it resembles the newer structure just described—a masonry erection in the shape and size of a native but, with a verandah in front. The deity worshipped here is a smallidel, and is called Dasabhuja, 'the ten-armed,' an epithet of the goddess Kali. The temple ones here an inscription, which has either been stolen, or, more likely, lies among the debris of the broken arches. The inscription, which was in Sanskrit, ran thus;— Mahabhuja, rasa, kshanni, Sake Dasabhuj alayam. Akara Sri Sitarama rayena Mandiram. "In the year of the era called Sak, earth-arms—tastes-earth, this temple, the abode of Dasabhuja, was built by Sitarama Raya."		The arches opening out of the verandah have fallendown, and an attempt has been made to repair it by masonry of the inestellumsy and unstable style.		No	No

22	Jessore	Muliammadpur	Temple of Lakshmi Narayan.	The date here requires some explanation. The Sak era commenced in 78 A. D. The date is given in a sort of enigmatical manner, by the words earth arms tastes-earth, and the plan of their enigma is thus explained:— "Earth" stands for one, for there is only one earth. "Arms" means two, for every one has two arms. "Tastes.—"Hindus enumerate we tastes: they are pungent, sour, saline, bitter, acid and awest. "Earth," as above, represents one. The date is therefore I and 2 and 6 and 1; or as we write it, with the largest denomination first, 1621. This year began in April 1699. Close to the Siva Mandir; on the west, there is another courtyard, the west and south sides of which are closed by the "To-hakhana," a long shed, fronted with arches, in which in Sitaram's time all the vessels were kept which had anything to do with the temple service, and probably profane vessels also. This court is separated from the treasure tank by the temple of Lakshmi Narayan. It is an octagonal structure with two storeys, having a flat roof, and has no pretensions to architectural form or beauty. In the upper storey, the god reposes at night, and for the day he is brought down to the lower storey, where he remains upon a couch. In front of him and upon the same couch, are two little idols, three or four inches high, Govind and Lakshmi, who are probably his attendants. It is agreed by everybody that Lakshmi Narayan (which is very like an ordinary round shaped stone) was found by Sitaram under ground. There was a dedicatory stone upon this temple, which has been either stolen or tost. The inscription on it as furnished by the Superintendent of the Temples, ran thus;		In ruins		No	No	*****

2	Jessore	Muhammadpur	Temple of Krishna.	Lakshmi, Narayana, Sityai Tark, Akshi, Rasa, Bhú, Sake, Nirmitan-pitri, punya, artham Sitárámena Mandirám. "For the abode of Lakshmi Narayan in the year of Sak, logic-eye-taste-earth, this temple was built by Sitaram for the sake of the beat-tude of his faither." The date is thus read. "Logic."—There are siz systems of logic. "Eye."—Eyes always go by lucos. "Taste."—As explained above there are siz tastes. "Earth."—As shown above stands for one. Reading this with the last figure, the thomsunds first as we do in English, we have the date 1626 of the Sak era, which commenced in April 1704. Beyond the limits of the quadrangle in the forest lies the village Kanhayanagar. Buried amid its trees and houses is a square of temples built by Sitaram, one of them, the temple of Krishma, being the finest building of the sort in the district. This building is on the west side of the square, and therefore fronting east. It is a square building, with a tower, surmounted by a painted dome, rising out of the middle of it. This tower is as high again as the building, and is composed merely of the cupola and the painted arches which support it. The front of the temple shows a face gradually rising from the sides to the middle, and flanked by two towers which rise rather higher than the roof. The towers to the front present a face showing three arches of the pointed form, one above the other, supporting a pointed dome. The top of the front face is, as already stated, in the from of the arc of a circle, higher in the middle than at the sides. Henouth the top line, and parallel with it, two bands of ornamented tracery are carried across the face, and between them a series of little sculptured squares, about 20 in all. The top line is also itself ornamented, and, with the two bands noticed, occupies about a		The whole temple is raised on a pedestal, whose floor is some three feet above report on the soil; and temple, pedestal and all are still in very good order, though signs of decay are showing themselves. 				quarter of the height of the front. Beneath these the face is divided into five equally broad portions. The two outer parts contain each three perpendicular bands of ornamental tracery with two lines of little sculptured squares between them. The other three parts contain doorways, of which the centre one is higher than the other two. In outline they are of the pointed-arch form, but instead of having their sides simple lines, they are waved, so as to be a succession of semi-circles. Above each of the doorways is a large square of equal breadth with the doorway, containing a device which at first sight looks remarkably like the "lion and unicorn fighting for the crown." It is, however, intended to represent two lions supporting a chalice. The spaces between the sides of the arches and the squares above the doorways are also ornamented. The whole face of the building, therefore, and partly also of the towers, is one mass of tracery and figured ornament. The sculptured squares, above referred to, of which there must be about fifty on this front face, represent each an episode in Krishna's life. The figures in them, as well us all the rest of the ornament, are done in relief on the brickwork of the building, the brooks being sculptured either before or after burning. The figures are very well done, and the tracery is all perfectly regular, having none of the slipshod style which too often characterizes mitve art in these districts. The sides of the building present much the same appearance as the front; but, instead of three doorways and two spaces, they have five doorways; within the doorways, both in front and and at the sides, is a veraudah, and the entrance to the temple is from this verandah, the image of Krishna being inside. On the top of the lowest arch of the lower a small round stone, twelve or eighteen inches in diameter, is let into the face of the brickwork. It bears a dedicatory inscription written in the Sanskrit language with Bengali

				letters, which, though fairly formed, are somewhat huddled together and are not very easily read. The inscription, which is written in four lines of Prakriti metre, is as follows:—Bana, dwandre, anga chandre pariganita sake Krishna, tosh, abhilashi—Srimad, viswasa, bhash, udbhaba, Kula, kamala, bhasaka Bhauntulyah—Ajasram Sauda, yukte ruchira, ruchi, Hare Krishna, geham vichitram-Sri, Sitarama Rayo jadupati nagare bhakitman, utsasarjja. "In the year of Sak, counted by arrow-pair-limb-moon, desirous of gratifying Krishna, Sitarama Raya, who is like a respiendent sun on the lotus of the family, to which attaches the great name of Biswas (that is, who casts a lustre on the great Biswas family, to which Sitaram belonged, as the sun casts a lustre on the lotus), erected in his devotion this splendid house of Krishna, within Jadupatinagar, a city filled with innumerable mansions, and so beautiful (that it) deprives of beauty that which is beautiful." Jadupatinagar is accordingly made, for metrical reasons, to do service for Kanhayanagar, the name of the village within which this temple is situated. Sitaram apparently considered that the many buildings which he had erected within his quadrangle were within the limits of the village Kanhayanagar, and therefore refers to the village as "filled with innumerable mansions." The date remains to be explained:— "Arrow" refers to the fice arrows of Cupid: "Pair" of course stands for two. "Limb."—The Hindu enumerates six limbs. "Moon."—Of course there is only one moon. The year therefore is 1625 Sak, which began in April 1703.

38	24-Per g u n- nahs.	Sagar Island, Diamond Har- boar.	A temple	A large Hindu temple on the west bank of the Hughly, about midway between the north and south limits of the island. No local fradition survives, however, and no information can be obtained regarding this building.	lami	In a folerable state of proser- vation.	iiò	No	- F R P	No	-16.X	*****
39	Ditto	Ditto	Temple of Kapila Muni.	The ruins of a temple dedicated to the famous sage Kapila. They are situated on the south-east corner of one of the minor islands into which Sagar island is divided by creeks and rivers, and on which stands also the Government light-house. There is no satisfactory account of the age of the temple, but its founder must have taken great pains to secure its preservation. The outer works were either of stone or bricks faced with large slabs of stone about two feet long, from 12 to 14 inches broad, and about the same depth.	20111	Of the temple nothing now remains, but a debris of bricks and stone, washed by the waves of the sea.	ini	No	***	No	400	Exploration and plans desirable.
40	Ditto	Diamond Harbour	Jariar Deul	A Hindu temple four miles almost due east of the tanks called Raidighi and Kankandighi, which are four to five miles south of the present limits of pergumah Khari. This is one of the most interesting of the rains yet discovered in the Sundarbans. It is known by the name of "Jartar Deul." and was probably dedicated to Mahadev or Siva, who also goes by the name of Jatadhari. The temple is built on a patch of high ground about two-thirds of an acre in area, but the edifice itself occupies much less space. On a rectangular building a single column rises to a height at present of about 60 feet; but as the top is broken, it is impossible to say what the original height was. The bricks are carved and well put together. They are of the same size and mould as these found near Kankandighi, and probably the rains near this tank and Jartar Deul were contemporary buildings. On the north of the temple there is a building under ground, and the local tradition is that this is the Bhogmandir, where the food dedicated to Hindu divinity was cooked.	F24434	The walls of the building which support the column are about nine feet in thickness; the masoury work inside and the arch over the entrance are well preserved.	Tet.	Yes		No		Photographs and drawings desir- able.

				The Deputy Collector* of Diamend Harbour reported in 1875 that "a copper plate discovered in a place a little to the north of Jartar Deul fixes the date of its erection by Raja Jayanta Chandra in the year 897 of the Bengali Saka era, corresponding to A.D. 975. The bricks are remarkably fine, and the cement very adhesive. The copper plate was discovered at the clearing of the jungle by the grantee, Durga Pershad Chowdree. The inscription was in Sanskrit, and the date, as usual, was given in an enigma with the name of the founder."						*The copper plata or an impression of it should be sent to the Government Epigraphist.

6	Dinajpur .		The Buddal jullar.	This pillar is mentioned in Asiatic Researches, volume I. West of it, in Bogra, north of Goburchappa, is a high brick structure orowned with the shrine of a Muhammadan hermit. This is believed to be the only Buddhist temple still to be traced in these parts. The remains of the Pal Kings are also to be found in the north-east of l'anchibibi.	*****	This pillar is still standing.	ia	Conservation desirable.	R o n g h drawings exist.	Exploration very desirable.
7	Ditto	****	The Giants' tombs.	Traces of the Buddhist Kings are left in the Giants' tombs, as well as in the tank of Mahipal Dighi. The tombs are 50 or 60 feet long, and represent Buddha entering into the state of Nicrona; but they have been appropriated by the Muhammadans, and are worshipped as belonging to Muhammadan pirs.		vire.	iia.	No	No ,	Ditto.
				One of them, 57 feet long, at Gopalgani, four miles north of Dinajpur, is called 'Pir- i-chehol Ghazi,' and there is another a mile south of Dinajpur, on the banks of the Purnabhaba.						
8	Ditto	Gangarampur	The ruins of a fort or town called Ban Garh.	The antiquities in Gangarampur are very numerous. The Ban Garh was the residence of the celebrated Ban Rajah, the founder of the Ban or Charack pajah. Being a Hinda city, the pools of Amrit and Jivan still exist there, and the stone bull, Vrisha, taken by Dr. Buchanan to Dinajpur, points to the worship of Siva. It is hence that the numerous carved stones, found in all parts of Dinajpur, Bogra, and Mahdah, are said to have come. Some of the finest specimens (a carved pillar and two doorways besides several pillars and doorways) are in the Dinajpur Bajbari. There is a beautiful specimen of a lintel in a barri close to Tambuli thana, and few Muhammadan shrines or mosques are without some of them. They may be divided into two classes, a kind of	*****	The chief rains scatthepresent day buried in almost impenetrable jungle.	iia.	Very desirable	No	Exploration need-

23	Jalpaiguri	Julpesh in May- nagari, West- ern Duars.	The temple of Sivu.	This is the most conspicuous rain in the district. It is a remarkably large building constructed of vary durable bricks. The temple is on a mound surrounded by a most, and is near the bank of the river Jhardan. The floor of the basement is sunk some depth in the mound, and a flight of steps leads down to it, while above rises a large square building surmounted by a dome, round the base and top of which		The red brick apparently was covered over with cement lightly, and well decorated. This has almost entirely worn off, leaving the building a mas-		Yes	Rough drawings exist.	Drawings very desirable.

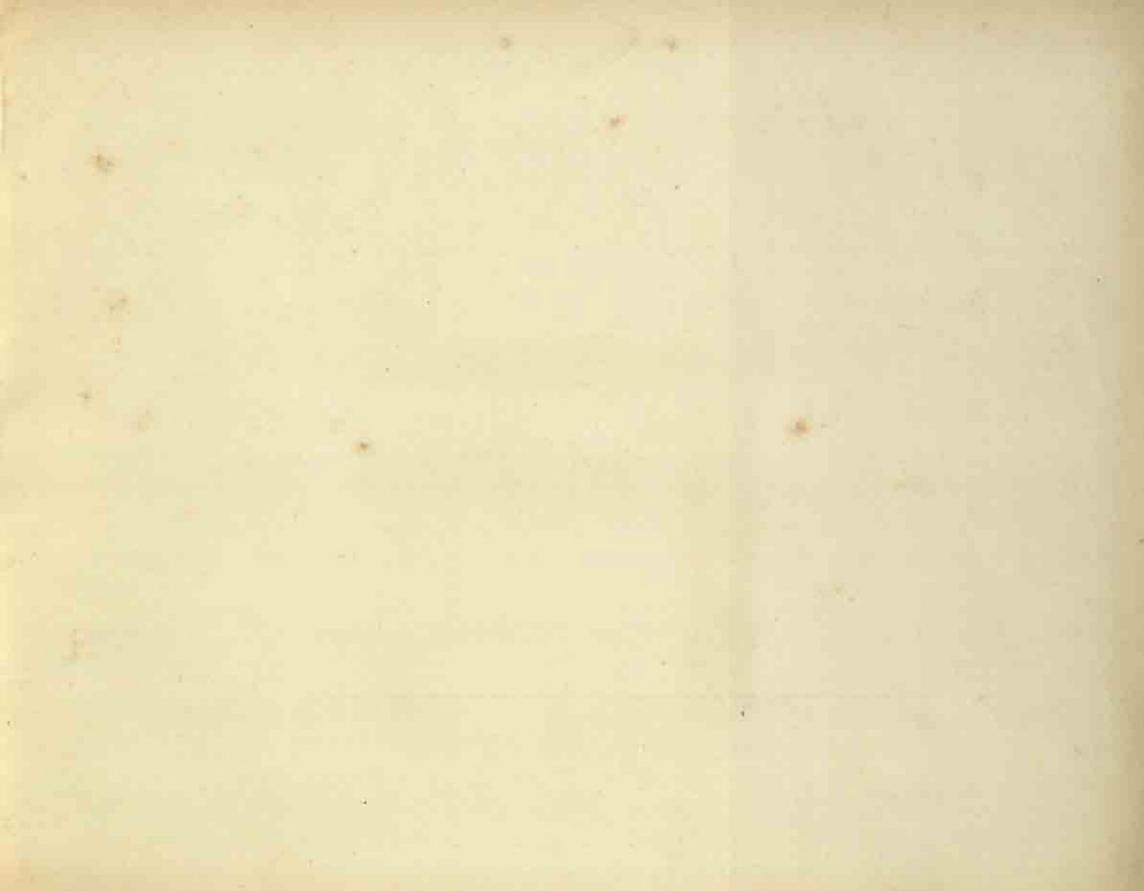

Number.	District.	Locality.	Name of object.	Any local history or tradition regarding it.	Custody or present use.	Present state of preservation.		RETHER RESTONATION IN DESIGNATE AND FOREIGE.	Whither ph tographs, plans, or dra ings of the building exist.	it. Ithuanea
				ran galleries. The height from basement floor to top of dome is about 92 feet; the lower story is 78 feet square, and the upper stories are 38 and 36 feet square respectively. The dome is 34 feet outer and 26 feet inner diameter, and 17 feet in height. The object of worship in this temple is a "Siva Linga," which is fixed in a hole in the floor of the underground basement, and has no "Gauripat." The depth of the floor below the surface causes it to be at all times more or less covered with water, and it is customary to bale this out before the idol is worshipped. The earliest tradition of this Siva is that it was placed where it now stands, or somewhere in the vicinity by a King of Assam, named Jalpeswar. After a lapse of time it appears to have been overlooked, or its existence forgotten, and the following is the legend connected with its re-discovery and the erection of the Jalpesh temple. Some 250 years ago, Pran Narayan, Raja of Kuch Bihar, dreamt that Siva appeared to him and said that he was at Gortali, and would be found it effective search were made. Inspired by this dream, Pran Narayan left his usual place of residence and, accompanied by an army and many attendants, went and commenced the search, starting at Gortali. After a long search, and with the aid of a cow which, it was found, used every day to go to the neighbouring jungle and drop its milk, the Kaja succeeded in tracing the Siva Linga, on which he ordered the crection of a temple over the spot. The present temple was then commenced. The Raja and his son having died, the temple was finally completed by his grandson, Mohendra Narayan.		sive, plain looking, red brick temple. Large stones have been used for door copings, &c.				
24	Jalpaiguri	Purbadeber, about one and a half miles east of Jalpesh.	Temple of Siva	This is a smaller red brick temple about a mile and a half east of Jalpesh, and ascribed to the Raja who built Jalpesh. The main entrance to this building is of massive stone	*****	name.	iii.	No	Roagh drawing exist.	Full details desirable.

25	Jalpaiguri	Mynagari	The ruins of an old stone temple of Siva.	These are situated about a mile south of Mynagari, and about two miles from Jalpesh, but nothing further is known about them.	******	275,071	iii.	No	No	Details desirable.
26	Ditto	Ditto	The ruins of a stone temple said to be of Sadockhoy Siva.	These are to the north of Mynagari. To the west of the river is a large stone water-vessel, also a large bathing stone, and the traces of a number of dry tanks, said to be 18 in number. There is no known tradition as to when or by whom the temple was built.		******	iii.	No	No	Ditto.
27	Ditto	Ditto	The ruins of a stone and brick temple of Pet- kati Devi.	This is situated a little north of Mynagari. The idol, which stands there still, had ten hands; of these, three hands, also the stomach and nose, have been cut off, hence the idol is known as the Petkati Thakurani. Tradition says that this idol was originally called Bhadreswari, but that, being mutilated by Kalapahar, it got the name of Petkati Devi. It is not known who erected the temple.		*******	iii.	*****	No	Ditto
28	Ditto	Bhitargarh, pergunnah Baikan- thapur.	The remains of three Old Garhs. Garh No. 1.	The largest one is that of Bhitargarh in the Baikenthapur pergunnah. This must have been a very large and strong fortification in old days, being no less than 4½ miles in length by 2 or 2¼ in breadth. The fort is surrounded by several moats, there being on one side no less than six, and there is in it a large tank with the remains of ten ghâts, at each of which traces of red bricks are seen. Little is known of the origin of this garh, but it is generally believed to have been built by one Prithi Raja, of a dynasty long prior to the Kuch Bihar one. The tank is called Prithi-sul Dighi, and it is said that the Raja of that name jumped into it and was drowned to avoid being touched by the Kichaks, who had then invaded his country. The water of this tank is wonderfully pure and clear, and free from weeds; it is but little used, in consequence of a local superstition against drinking it. The city is supposed to have consisted of four separate enclosures, the innermost being the Itaja's palace. It must have been a place of		There are no visible ruins, but the mounds near which old bricks are to be found are probably the remains of the old buildings.	III.	No	. No	Exploration necessary.
